The Photomagneton and Quantum Field Theory Ahmed A. Hasanein, Myron Wyn Evans, 1994 This first volume of this two volume set deals with the important recent discovery of the photomagneton of electromagnetic radiation a discovery which is fundamental in quantum field theory and in quantum mechanics in matter The photomagneton is the elementary quantum of magnetic flux density carried by the individual photon in free space and is generated directly by the intrinsic angular momentum of the free photon The volume develops the theory of the photomagneton in a series of papers which cover all the major aspects of the theory from classical electrodynamics to the relativistic quantum field Several suggestions are given for experimental tests and the available experimental evidence is discussed in detail The overall conclusion of the series of papers is that the photomagneton which is observable experimentally in magneto optical phenomena indicates the presence in free space of a novel longitudinal magnetic flux density linked ineluctably to the usual transverse components If the photomagneton is not observed then a paradox would have emerged at the most fundamental electrodynamic level necessitating a modification of the Maxwell equations themselves

Biochemistry Donald Voet, Judith G. Voet, 2010-11-16 The Gold Standard in Biochemistry text books Biochemistry 4e is a modern classic that has been thoroughly revised Don and Judy Voet explain biochemical concepts while offering a unified presentation of life and its variation through evolution Incorporates both classical and current research to illustrate the historical source of much of our biochemical knowledge

Photoimmunology John Parrish, 2013-11-11 In this book we attempt to summarize the present state of knowledge in the field of photoimmunology and to provide the background necessary to put this knowledge into perspective This objective requires descriptive overviews in photobiology immunology and dermatology Our hope is to

facilitate interdisciplinary communication and to stimulate interest in photoimmunology

Section I Principles of Photoimmunology describes 1 basic interactions between UV and visible radiation and biologic matter 2 the optical properties of human skin and 3 normal and abnormal responses to UV radiation Basic principles of selected aspects of immunology and photobiology are explained

Section II Experimental Photoimmunology describes molecular cellular animal and human studies in photoimmunology

Section III Clinical Photoimmunology presents evidence of the involvement of photoimmunologic mechanisms in diseases of the skin and blood and examines the possible involvement of immunologic mechanisms in therapeutic photomedicine

The fundamental principles outlined in this book should prove useful for decades to come However our expectation is that the experimental data will be outdated in a short period of time The potential of photoimmunology is great enough and the serious study of photoimmunology is recent enough that this should be the case This book is dedicated to the goal of continuing rapid growth in the field of photoimmunology
