NASA's Scientist-Astronauts Shayler David,Colin Burgess,2007-09-19 Mounting pressure in the early 1960s from the National Academy of Sciences NAS to study ways of expanding the role of astronauts to conduct science on future space missions led to NASA s conclusion that flying scientifically trained crewmembers would generate greater returns from each mission NASA and industry studies continued investigating possibilities that could lead to the eventual creation of the first space stations using surplus Apollo hardware through the Apollo Applications Programme AAP There was also a growing interest within the military to create their own manned space station programme conducting on orbit experiments and research with strategic advantages for national security In October 1964 the Soviets launched Voskhod 1 whose 3 man crew were identified as the first scientific passengers in space A few days later NASA and the NAS had completed joint studies into the possibility of using scientists in the manned space programme and invited scientists to apply for astronaut training In selecting the first group of scientist astronauts NASA had one firm requirement any person accepted into the programme would have to qualify as a military jet pilot While the second group of scientists were completing their academic survival and flight training programme the remaining members of the first scientist astronaut group were involved in supporting the developing Apollo Applications programme and the Apollo lunar programme

Integrating Women Into the Astronaut Corps Amy E. Foster,2011-12 Why Amy E

Foster asks did it take two decades after the Soviet Union launched its first female cosmonaut for the United States to send its first female astronaut into space In answering this question Foster recounts the complicated history of integrating women into NASA's astronaut corps NASA selected its first six female astronauts in 1978 Foster examines the political technological and cultural challenges that the agency had to overcome to usher in this new era in spaceflight She shows how NASA had long developed progressive hiring policies but was limited in executing them by a national agenda to beat the Soviets to the moon budget constraints and cultural ideas about women's roles in America Lively writing and compelling stories including personal interviews with America's first women astronauts propel Foster's account Through extensive archival research Foster also examines NASA's directives about sexual discrimination the technological issues in integrating women into the corps and the popular media's discussion of women in space Foster puts together a truly original study of the experiences not only of early women astronauts but also of the managers and engineers who helped launch them into space In documenting these events Foster offers a broader understanding of the difficulties in sexually integrating any workplace even when the organization approaches the situation with as positive an outlook and as strong a motivation as did NASA **Forever**

Young John W Young, 2012-09-16 He walked on the Moon He flew six space missions in three different programs more than any other human He served with NASA for more than four decades His peers called him the astronaut's astronaut Enthusiasts of space exploration have long waited for John Young to tell the story of his two Gemini flights his two Apollo missions the first ever Space Shuttle flight and the first Spacelab mission Forever Young delivers all that and more Young's personal journey from engineering graduate to fighter pilot to test pilot to astronaut to high NASA official to clear headed predictor of the fate of Planet Earth Young with the assistance of internationally distinguished aerospace historian James Hansen recounts the great episodes of his amazing flying career in fascinating detail and with wry humor He portrays astronauts as ordinary human beings and NASA as an institution with the same ups and downs as other major bureaucracies He frankly discusses the risks of space travel including what went wrong with the Challenger and Columbia shuttles Forever Young is one of the last memoirs produced by an early American astronaut It is the first memoir written by a chief of the NASA astronaut corps Young's experiences and candor make this book indispensable to everyone interested in the U S space program **Congressional Record** United States. Scientific Achievements and Impacts Jill S. Tietjen, 2016-09-23 Packed with fascinating biographical sketches of female engineers this chronological history of engineering brightens previously shadowy corners of our increasingly engineered world's recent past In addition to a detailed description of the diverse arenas encompassed by the word engineering and a nuanced overview of the development of the field the book includes numerous statistics and thought provoking facts about women's roles in the achievement of thrilling scientific innovations This text is a unique resource for students launching research projects in engineering and related fields professionals interested in gaining a broader understanding of how

engineering as a discipline has been impacted by events of global significance and scholars of women's immense often obscured contributions to scientific progress

At Home in Space Ben Evans, 2011-09-28 This volume like the others not only focuses upon the individual missions within the decade but also upon key challenges facing human space exploration at specific points within those years from the problems of simply breathing and eating in space to the challenges of venturing outside in a pressurized spacesuit the development of newer and better space toilets and the difficulties of locomotion on the Moon The Eighties was a time when traveling into space far more commonplace Examining in detail the American and Soviet fronts Ben Evans gives a comprehensive analysis of the varying fortunes of the U S space shuttle in the Eighties including its early test flights and commercial flights its problems the 51L tragedy and its aftermath and the resumption of operations with STS 26 The U S story ends with STS 37 in April 1991 In the Soviet sphere two pivotal space station efforts Salyut 7 and its successor Mir are considered showing how they were alike and different

To Fly Among the Stars: The Hidden Story of the Fight for Women Astronauts (Scholastic Focus) Rebecca Siegel, 2020-03-03 A searing look at the birth of America's space program and the men and women aviators who set its course In the 1960s locked in a heated race to launch the first human into space the United States selected seven superstar test pilots and former military air fighters to NASA's astronaut class the Mercury 7 The men endured grueling training and constant media attention for the honor of becoming America's first space heroes But a group of 13 women accomplished air racers test pilots and flight instructors were enduring those same astronaut tests in secret hoping to defy social norms and earn a spot among the stars With thrilling stories of aviation feats frustrating tales of the fight against sexism and historical photos To Fly Among the Stars recounts an incredible era of US innovation and the audacious hope of the women who took their fight for space flight all the way to Washington DC

The Last of NASA's Original Pilot Astronauts David J. Shayler, Colin Burgess, 2017-06-19 Resulting from the authors deep research into these two pre Shuttle astronaut groups many intriguing and untold stories behind the selection process are revealed in the book The often extraordinary backgrounds and personal ambitions of these skilled pilots chosen to continue NASA's exploration and knowledge of the space frontier are also examined In April 1966 NASA selected 19 pilot astronauts whose training was specifically targeted to the Apollo lunar landing missions and the Earth orbiting Skylab space station Three years later following the sudden cancellation of the USAF's highly classified Manned Orbiting Laboratory MOL project seven military astronauts were also co-opted into NASA's space program This book represents the final chapter by the authors in the story of American astronaut selections prior to the era of the Space Shuttle Through personal interviews and original NASA documentation readers will also gain a true insight into a remarkable age of space travel as it unfolded in the late 1960s and the men who flew those historic missions

Once Upon a Time I Lived on Mars Kate Greene, 2020-07-14 When it comes to Mars the focus is often on how to get there the rockets the engines the fuel But upon arrival what will it actually be like In 2013 Kate Greene moved to Mars That is along with five fellow crew members she embarked on NASA's

first HI SEAS mission a simulated Martian environment located on the slopes of Mauna Loa in Hawaii. For four months she lived, worked and slept in an isolated geodesic dome conducting a sleep study on her crew mates and gaining incredible insight into human behavior in tight quarters as well as the nature of boredom, dreams and isolation that arise amidst the promise of scientific progress and glory. In *Once Upon a Time I Lived on Mars*, Greene draws on her experience to contemplate humanity's broader impulse to explore. The result is a twined story of space and life of the standard able-bodied astronaut and Greene's brother's disability, the lag time of interplanetary correspondences and the challenges of a long distance marriage of freeze-dried egg powder and fresh pineapple of departure and return. By asking what kind of wisdom humanity might take to Mars and elsewhere in the Universe, Greene has written a remarkable wide-ranging examination of our time in space, right now, as a pre-Mars species poised on the edge, readying for launch. *First Man* James R.

Hansen, 2012-11-27 On July 20, 1969, the world stood still to watch American astronaut Neil A. Armstrong become the first person ever to step on the surface of another heavenly body. Upon his return to Earth, Armstrong was celebrated for his monumental achievement. He was also, as NASA historian Hansen reveals in this authorized biography, misunderstood. Armstrong's accomplishments as an engineer, a test pilot and an astronaut have long been a matter of record, but Hansen's access to private documents and unpublished sources and his interviews with more than 125 subjects, including more than fifty hours with Armstrong himself, yield the first in-depth analysis of this elusive, reluctant hero. *Foothold in the Heavens*

Ben Evans, 2010-08-14 *Foothold in the Heavens*, the second volume in the *A History of Human Space Exploration* series, focuses upon the 1970s, the decade in which humanity established real long-term foothold in the heavens with the construction and operation of the first space stations. It marked a transitional phase between the heady race to the Moon days of the Sixties and efforts to make space travel more economical, more frequent and more routine. Space exploration in the Seventies, although dominated by Soviet achievement, saw the first efforts of mankind to really live and work in space, producing results of direct benefit to humans on Earth. The emphasis changed from the gung-ho strap it on and go pioneers of the Sixties to the more practical exploitation of space for science, medicine and technology. This book focuses on each mission launched between April 1971 and April 1981, from the launch of the world's first space station to the end of operations of Salyut 6 and from the expanded, lengthy exploration of the Moon on Apollo 15 to the first flight of the Shuttle. **AAPOLLO**

XI / 11 PREFLIGHT AND FLIGHT: HISTORICAL ANALYSIS, DRAWINGS & PHOTOGRAPHS, Description Apollo 11 was the first mission in which humans walked on the lunar surface and returned to Earth. On 20 July 1969, two astronauts, Apollo 11 Commander Neil A. Armstrong and LM pilot Edwin E. Buzz Aldrin Jr., landed in Mare Tranquillitatis, the Sea of Tranquility, on the Moon in the Lunar Module (LM), while the Command and Service Module (CSM) with CM pilot Michael Collins continued in lunar orbit. During their stay on the Moon, the astronauts set up scientific experiments, took photographs and collected lunar samples. The LM took off from the Moon on 21 July and the astronauts returned to Earth on 24 July. Apollo

Outposts on the Frontier Jay Chladek, 2017-08 The International Space Station ISS is the largest man made structure to orbit Earth and has been conducting research for close to a decade and a half Yet it is only the latest in a long line of space stations and laboratories that have flown in orbit since the early 1970s The histories of these earlier programs have been all but forgotten as the public focused on other higher profile adventures such as the Apollo moon landings A vast trove of stories filled with excitement danger humor sadness failure and success *Outposts on the Frontier* reveals how the Soviets and the Americans combined strengths to build space stations over the past fifty years At the heart of

these scientific advances are people of both greatness and modesty Jay Chladek documents the historical tapestry of the people the early attempts at space station programs and how astronauts and engineers have contributed to and shaped the ISS in surprising ways Outposts on the Frontier delves into the intriguing stories behind the USAF Manned Orbiting Laboratory the Almaz and Salyut programs Skylab the Apollo Soyuz Test Project Spacelab Mir station Spacehab and the ISS and gives past due attention to Vladimir Chelomei the Russian designer whose influence in space station development is as significant as Sergei Korolev's in rocketry Outposts on the Frontier is an informative and dynamic history of humankind's first outposts on the frontier of space Assembly West Point Association of Graduates (Organization), 1971
