It is an established fact that every particle in the universe attracts other particles with a force that is proportional to the product of their masses and is inversely proportional to the square of their intermediate distance. Publication of the law was known as First Great Unification as it marked the unification of previously published laws of gravitation.

- 1 The theory of gravitation was developed from the Inductive Reasoning made primarily by Issac Newton.
- 2 The first test of Newton's law of gravitation between masses in the laboratory duly performed to examine the mechanism with which universality of the law can be claimed was the Cavendish experiment conducted by the British scientist Henry Cavendish in 1798. It took a long span of 111 years after the publication of Newton's Principia and approximately 71 years after the death of the scientist.
