Principles for Education Research,2002-04-28 Researchers historians and philosophers of science have debated the nature of
scientific research in education for more than 100 years Recent enthusiasm for evidence based policy and practice in
education now codified in the federal law that authorizes the bulk of elementary and secondary education programs have
brought a new sense of urgency to understanding the ways in which the basic tenets of science manifest in the study of
teaching learning and schooling Scientific Research in Education describes the similarities and differences between scientific
inquiry in education and scientific inquiry in other fields and disciplines and provides a number of examples to illustrate
these ideas Its main argument is that all scientific endeavors share a common set of principles and that each field including
education research develops a specialization that accounts for the particulars of what is being studied The book also provides
suggestions for how the federal government can best support high quality scientific research in education Cumulative
Book Index ,1959 **The Process of Science** Nancy Nersessian,1987-02-28 For some time now the philosophy of science
has been undergoing a major transfor mation It began when the received view of scientific knowledge that developed by
logical positivists and their intellectual descendants was challenged as bearing little resemblance to and having little
relevance for the understanding of real science Subsequently an overwhelming amount of criticism has been added One
would be hard pressed to find anyone who would support the received view today Yet in the search for a new analysis of
scientific knowledge this view continues to exert influence over the tenor of much of present day philosophy of science in
particular over its problems and its methods of analysis There has however emerged an area within the discipline called by
some the new philosophy of science that has been engaged in transforming the problems and methods of philosophy of
science While there is far from a consensus of beliefs in this area most of the following contentions would be affirmed by

those working in it that science is an open ended on going activity whose character has changed significantly during its history that science is not a monolithic enterprise that good science can lead to false theories that science has its roots in everyday circumstances needs methods concepts etc **Educational Review** Nicholas Murray Butler, Frank Pierrepont Graves, Charles Alexander Nelson, 1904 **Educational Review** , 1904
