Chemical Changes

Read the passage and answer the following questions:

1. What are the products of this chemical reaction?

As exemplified in the decomposition of hydrogen peroxide, the breaking of molecules in this chemical reaction, the products are molecules that are not present in H_2O_2 , and the decomposition reaction is a chemical change. In this case, it is a chemical change because the molecules are broken and new molecules are formed.

2. What is the reactant in this chemical reaction? Is it a solid, liquid, gas, or a mixture? Is it a pure substance or a mixture?

3. What is the physical state of the reactant and the products?

Hydrogen peroxide is a colorless liquid. It is a pure substance. The products are water and oxygen gas. Water is a colorless liquid, and oxygen is a colorless gas. The reaction is a chemical change because the molecules are broken and new molecules are formed. The reaction is also a physical change because the state of the reactant and the products are different.

4. According to the law of conservation of mass, if 100 g of H_2O_2 decomposes, how much H_2O and O_2 are produced?

100 grams

5. What is the balanced chemical equation for this reaction? Is it?

6. What is the balanced chemical equation for this reaction? Is it?

7. What are the physical states of the reactant and the products?

Reactant: H_2O_2 (liquid)
Products: H_2O (liquid), O_2 (gas)

8. What is the physical state of the reactant and the products?

9. What is the balanced chemical equation for this reaction? Is it?

In nature, the reaction of H_2O_2 is a chemical change. It is a chemical change because the molecules are broken and new molecules are formed.

10. According to the law of conservation of mass, if 100 g of H_2O_2 decomposes, how much H_2O and O_2 are produced?
