Cognitive and affective control Gilles Pourtois, Wim Notebaert, Tom Verguts, Traditionally cognition and emotion are seen as separate domains that are independent at best and in competition at worst The French scientist and philosopher Blaise Pascal 1623 1662 famously said Le coeur a ses raisons que la raison ne connait point The heart has its reasons that reason does not know Over the last century however psychologists and neuroscientists have increasingly appreciated their very strong reciprocal connections and interactions Initially this was demonstrated in cognitive functions such as attention learning and memory and decision making For instance an emotional stimulus captures attention e.g. Anderson Verguts

Notebaert 2009 From this perspective cognitive control is not a cool encapsulated executive function but instead involves rapidly calculating the value of situational contextual and action cues Rushworth Behrens 2008 for the purpose of adapting the cognitive system toward future optimal performance A wide array of research has shed light on cognitive control and its interactions with affect or motivation Behaviorally important phenomena include how people respond to difficult stimuli e g incongruent stimuli task switches negative feedback or errors and how this influences subsequent task processing Neurally an important target structure has been the anterior cingulate cortex ACC and its connections to traditional emotional e g amygdala and cognitive areas e g pre motor cortex dorsolateral prefrontal cortex ACC seems to play a predominant role in integrating distant effects from remote cognitive and emotion systems in order to guide and optimize behavior The current special issue focuses on the bi directional link between emotion and cognitive control We invite studies that investigate the influence from emotion on cognitive control or vice versa the influence of cognitive control on emotion Contributions can be of different types We welcome empirical contributions behavioral or neuroscientific but also computational modeling theory or review papers By bringing together researchers from the traditionally separated domains we hope to further stimulate the crosstalk between emotion and cognitive control and thus to deepen our understanding of both List of Lights, Radio Aids, and Fog Signals ,2003
