Enns, George C. McGuire, 2012-12-06 Philosophy of the Text This text presents an introductory survey of the basic concepts and applied mathematical methods of nonlinear science as well as an introduction to some simple related nonlinear experimental activities Students in engineering physics chemistry mathematics computing science and biology should be able to successfully use this book In an effort to provide the reader with a cutting edge approach to one of the most dynamic often subtle complex and still rapidly evolving areas of modern research nonlinear physics we have made extensive use of the symbolic numeric and plotting capabilities of the Maple software system applied to examples from these disciplines No prior knowledge of Maple or computer programming is assumed the reader being gently introduced to Maple as an auxiliary tool as the concepts of nonlinear science are developed The CD ROM provided with this book gives a wide variety of illustrative

non linear examples solved with Maple In addition numerous annotated examples are sprinkled throughout the text and also placed on the CD An accompanying set of experimental activities keyed to the theory developed in Part I of the book is given in Part II These activities allow the student the option of hands on experience in exploring nonlinear phenomena in the REAL world Although the experiments are easy to perform they give rise to experimental and theoretical complexities which are not to be underestimated
