7. Notes when measuring a sample

As shown in point 5, we were able to graph the transition of the force against the amount of press without any issue. This allows you to visually check the sensation (feeling) that is transmitted when you click. When measuring, we used a model with a maximum force value of 20N, but the measured value did not exceed 5N, so we recommend using a model with 5N instead of 20N. We recommend the 5N model instead of the 20N model because the resolution of the 20N model is 0.01N, while the 5N model can confirm the resolution down to 0.001N, which enables more precise analysis.
