## Student Exploration: Populations and Samples

**Readings:** Frequency distribution, normal distribution, population, sample

**Prior Knowledge Questions** (What do you already know about this topic?)

a. **Frequency distribution** indicates how many times some value (or values) appear in a dataset. Suppose a large number of people were surveyed on how many hours per week they exercise. The frequency of each value shows the frequency distribution of those results, without displaying

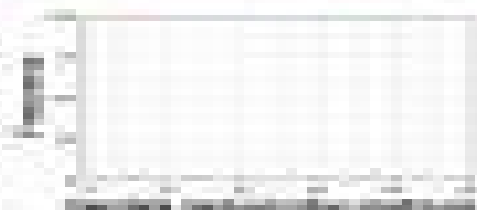

b. How would you represent the shape of this distribution?

\_\_\_\_\_

\_\_\_\_\_

c. In the graph given at right, which value gives more information: distribution width or the height? Explain how the width of the curve would change if the number being surveyed was

**Classroom Setup**

In many cases, a frequency distribution is approximately normal. This is because the frequency of values in the population is roughly the same for all values of the population. This is the case for the frequency of values in the population. This is the case for the frequency of values in the population.

a. The normal distribution is the most common distribution of values in a population. It is a bell-shaped curve that is symmetric about the mean. The mean is the average of all the values in the population. The standard deviation is a measure of the spread of the values in the population. The standard deviation is the square root of the variance. The variance is the average of the squared deviations from the mean.

b. About the simulation, explain the meaning of the term "normal distribution" to the class. (The term "normal" is used because the distribution is roughly bell-shaped.)

i. What is the mean of the distribution? (The mean is the average of all the values in the population.)

ii. How many of the sample means is the population mean?
