Polymerase Chain Reaction

Synopsis

In the Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another reaction, similar to the one that takes place, to investigate the crime, understand how it took place, the subject stated against in the book that the murderer may not be who he says he is.

Design and

After sampling, you will go to the next location in the simulation. The sample of DNA you collected. By using a mixture of thermocyclase, you can amplify the DNA from the crime scene. It is up to you to make the correct samples accurately the PCR equipment.

How the structure of DNA works in replication of DNA

In the simulation, you will see the DNA replication in the laboratory. This illustrates the structure of DNA and the replication cycle. You will see how the DNA is replicated. The experimental process, as well as all the details of the PCR cycle.

Identify the samples

In the PCR simulation, you will collect your samples and other samples collected from the laboratory. You will also see the samples that are present in the sample. You will see the PCR results and the structure.

Learning Objectives

In the PCR simulation, you will see the results:

1. Identify the structure of the PCR equipment and the results.
2. Identify the PCR equipment using the PCR results and the results.
