

1. There was no organization in the instructions. The instructions should be written in a "...three-part structure of instruction, namely, first operation, second skill." The instructions presented above listed all things with step one, there's no instruction on how to turn on the device. There's no review of instruction or how to implement presented in the instructions.
 2. There is no defined audience for these instructions. With a clear audience, that will depict the "...the level of familiarity your readers have with the topic presented." If the target audience is for people who are familiar with technology, the instructions don't have to go as in-depth detail as if the target audience was asked for people that are not as tech-savvy. Then the instructions would have looked like to follow:
 3. There's no equipment needed list. That should be in the beginning of the instructions manual. With the equipment list, it could leave the reader with unanswered questions. What cord attaches to the computer to upload the recording? Questions such as that could be easily answered with an equipment list.

Popular Culture and Representations of Literacy Bronwyn Williams, Amy Zenger, 2007-11-13 Movies are filled with scenes of people of all ages sexes races and social classes reading and writing in widely varied contexts and purposes Yet these scenes go largely unnoticed despite the fact that these images recreate and reinforce pervasive concepts and perceptions of literacy This book addresses how everyday literacy practices are represented in popular culture specifically in mainstream widely distributed contemporary movies If we watch films carefully for who reads and writes in what settings and for what social goals we can see a reflection of the dominant functions and perceptions that shape our conceptions of literacy in our culture Such perceptions influence public and political debates about literacy instruction teachers expectations of what will happen in their classrooms and student s ideas about what reading and writing should be

Pathways to Institutional Improvement with Information Technology in Educational Management C.J. Patrick Nolan, A. Fung, Margaret Brown, 2006-04-11 New Zealand schools have experienced unprecedented change during the last decade Radical restructuring of the frameworks for both curriculum and qualifications followed a movement towards self management in 1989 The curriculum framework consisting of seven essential learning areas has been progressively introduced with completion not expected until 2002 The new Qualifications Framework based on unit standards was launched in 1994 The introduction of unit standards signalled an emphatic movement towards the use of internal assessment for awarding qualifications at the senior secondary school level Each course had unit standards defined which described the outcomes and the performance criteria that would be used to determine whether or not the standard had been achieved Approximately five to eight standards would be used for each full year course and each standard had a number of credits associated with it The plan which has since been modified was for these credits to contribute to a National Certificate of Educational Achievement at years 12 and 13 and other subject specific National Certificates Secondary schools were faced with the task of recording and reporting 1 unit standard results to the New Zealand Qualifications Authority This by itself was not a major issue as the significant suppliers of CSIS had modules available which satisfied this need At this time a model was being presented to school audiences demonstrating how the recording reporting and evaluation of assessment data relating to the curriculum framework could be relatively straight forward IF there was a common assessment currency across the school This model was converted into software form for demonstration purposes
