Early Television George Shiers, 2014-07-16 Exploring the beginnings of the most influential communications medium of all time, this work covers the history of early mechanical and later electronic means of television. It takes a chronological approach to the subject from its theoretical conception in the late 1800s through important market experiments just prior to World War II. Coverage is global and multilingual with material from French, German, Russian and English sources. Each chapter begins with a historical essay that places the period in context. After 1927, each chapter focuses on a single year. The coverage weaves together the discoveries and developments in all countries, reporting on the work of solitary inventors as well as research teams. The text ties together annotated citations that make up the bulk of each chapter and excerpts from important documents or eyewitness accounts. Each chapter also contains a chronology of the advances and breakthroughs during the period covered. The entire work is carefully cross referenced and indexed to provide easy access. Albert Abramson, 2007-09-29 Albert Abramson published with McFarland in 1987 a landmark volume titled *The History of Television 1880-1941*, massive research Library Journal voluminous documentation. Choice many striking old photos. *The TV Collector*. At last, he has produced the follow up volume. The reader may be assured there is no other book in any language that is remotely comparable to it. Together, these two volumes provide the definitive technical history of the medium. Upon the development in the mid 1940s of new cameras and picture tubes that made commercial television possible worldwide, the medium rose rapidly to prominence. Perhaps even more important was the invention of the video tape recorder in 1956, allowing editing, re-shooting and rebroadcasting. This second volume, *1942 to 2000*, covers these significant developments and much more. Chapters are devoted to television during World War II and the postwar era, the development of color television, Ampex Corporation's contributions, television in Europe, the change from helical to high band technology, solid state cameras, the television coverage of Apollo II, the rise of electronic journalism, television entering the studios, the introduction of the camcorder, the demise of RCA at the hands of GE, the domination of Sony and Matsushita, and the future of television in cinema and the 1080 P24 format. The book is heavily illustrated, as is the first volume.
