CAD Data Transfer for Solid Models E.G. Schlechtendahl, 2013-11-11 Principal authors U Kroszynski B Palstr9Sm 1 1 The evolution of concepts and specifications for CAD data exchange The CAD CAM community has witnessed during the last decade the appearance of several specifications as well as proposals for standards which either attempt to cover wider areas or to be more reliable and stable than the others With the rapid evolution of both hardware and software the capabilities offered by CAD systems and CAD based application systems are far more advanced than they were only ten years ago even when they are now based on micro computers or personal computers The situation with standards however is not and cannot be so In order to be reliable and accepted by a wide community of both vendors and users a standard has to be stable This implies a life span of at least a decade This also implies that the standard has to be general and flexible enough to accommodate present as well as expected future

developments 1 1 1 IGES The initial development of concepts for CAD data exchange is strongly influenced by the US Integrated Computer Aided Manufacturing ICAM programme that dealt with the development of methods for data exchange In September 1979 a subgroup was established with participation of the National Bureau of Standards the General Electric Company and the Boeing Company The result of this effort was the Initial Graphics Exchange Specification IGES that was published as a NBS report 61 in 1980

Design Computing and Cognition '08 John S. Gero,Ashok K. Goel,2008-09-27 The importance of research and education in design continues to grow For example government agencies are gradually increasing funding of design research and increasing numbers of engineering schools are revising their curricula to emphasize design This is because of an increasing realization that design is part of the wealth creation of a nation and needs to be better understood and taught The continuing globalization of industry and trade has required nations to re examine where their core contributions lie if not in production efficiency Design is a precursor to manufacturing for physical objects and is the precursor to implementation for virtual objects At the same time the need for sustainable development is requiring design of new products and processes and feeding a movement towards design innovations and inventions There are now three sources for design research design computing design cognition and human centered information technology The foundations for much of design computing remains artificial intelligence with its focus on ways of representation and on processes that support simulation and generation Artificial intelligence continues to provide an environmentally rich paradigm within which design research based on computational constructions can be carried out Design cognition is founded on concepts from cognitive science an even newer area than artificial intelligence It provides tools and methods to study human designers in both laboratory and practice settings
