range of disciplines explore how humans and artificial agents can quickly learn completely new tasks through natural interactions with each other Humans are not limited to a fixed set of innate or preprogrammed tasks We learn quickly

through language and other forms of natural interaction and we improve our performance and teach others what we have learned Understanding the mechanisms that underlie the acquisition of new tasks through natural interaction is an ongoing challenge Advances in artificial intelligence cognitive science and robotics are leading us to future systems with human like capabilities A huge gap exists however between the highly specialized niche capabilities of current machine learning systems and the generality flexibility and in situ robustness of human instruction and learning Drawing on expertise from multiple disciplines this Str n gmann Forum Report explores how humans and artificial agents can quickly learn completely new tasks through natural interactions with each other The contributors consider functional knowledge requirements the ontology of interactive task learning and the representation of task knowledge at multiple levels of abstraction They explore natural forms of interactions among humans as well as the use of interaction to teach robots and software agents new tasks in complex dynamic environments They discuss research challenges and opportunities including ethical considerations and make proposals to further understanding of interactive task learning and create new capabilities in assistive robotics healthcare education training and gaming Contributors Tony Belpaeme Katrien Beuls Maya Cakmak Joyce Y Chai Franklin Chang Ropafadzo Denga Marc Destefano Mark d Inverno Kenneth D Forbus Simon Garrod Kevin A Gluck Wayne D Gray James Kirk Kenneth R Koedinger Parisa Kordjamshidi John E Laird Christian Lebiere Stephen C Levinson Elena Lieven John K Lindstedt Aaron Mininger Tom Mitchell Shiwali Mohan Ana Paiva Katerina Pastra Peter Pirolli Roussell Rahman Charles Rich Katharina J Rohlfing Paul S Rosenbloom Nele Russwinkel Dario D Salvucci Matthew Donald D Sangster Matthias Scheutz Julie A Shah Candace L Sidner Catherine Sibert Michael Spranger Luc Steels Suzanne Stevenson Terrence C Stewart Arthur Still Andrea Stocco Niels Taatgen Andrea L Thomaz J Gregory Trafton Han L J van der Maas Paul Van Eecke Kurt VanLehn Anna Lisa Vollmer Janet Wiles Robert E Wray III Matthew Yee King The Cambridge Handbook of Visuospatial Thinking Priti Shah,Akira Miyake,2005-07-25 The ability to navigate across town comprehend an animated display of the functioning of the human heart view complex multivariate data on a company s website or to read an architectural blueprint and form a three dimensional mental picture of a house are all tasks involving visuospatial thinking The field of visuospatial thinking is a relatively diverse interdisciplinary research enterprise An understanding of visuospatial thinking and in particular how people represent and process visual and spatial information is relevant not only to cognitive psychology but also education geography architecture medicine design computer science artificial intelligence semiotics and animal cognition The goal of this book first published in 2005 is to present a broad overview of research on visuospatial thinking that can be used by researchers as well as students interested in this topic in both basic research and applied naturalistic contexts *The neurobiology of emotion-cognition interactions* Hadas Okon-Singer, Luiz Pessoa, Alexander J. Shackman,2015-06-12 There is increasing interest in understanding the interplay of emotional and cognitive processes The objective of the Research Topic was to provide an interdisciplinary survey of cutting edge neuroscientific research on the

interaction and integration of emotion and cognition in the brain The following original empirical reports commentaries and theoretical reviews provide a comprehensive survey on recent advances in understanding how emotional and cognitive processes interact how they are integrated in the brain and what their implications for understanding the mind and its disorders are These works encompasses a broad spectrum of populations and showcases a wide variety of paradigms measures analytic strategies and conceptual approaches The aim of the Topic was to begin to address several key questions about the interplay of cognitive and emotional processes in the brain including what is the impact of emotional states anxiety and stress on various cognitive functions How are emotion and cognition integrated in the brain Do individual differences in affective dimensions of temperament and personality alter cognitive performance and how is this realized in the brain Are there individual differences that increase vulnerability to the impact of affect on cognition who is vulnerable and who resilient How plastic is the interplay of cognition and emotion Taken together these works demonstrate that emotion and cognition are deeply interwoven in the fabric of the brain suggesting that widely held beliefs about the key constituents of the emotional brain and the cognitive brain are fundamentally flawed Developing a deeper understanding of the emotional cognitive brain is important not just for understanding the mind but also for elucidating the root causes of its many debilitating disorders

How to Design Questions and Tasks to Assess Student Thinking Susan M. Brookhart, 2014-08-20 With new standards emphasizing higher order thinking skills students will have to demonstrate their ability to do far more than simply remember facts and procedures But what s the best way for teachers to ensure that students have such skills In this highly accessible guide author Susan M Brookhart shows how to do just that by providing specific guidelines for designing targeted questions and tasks that align with standards and assess students ability to think at higher levels Aided by dozens of examples across grade levels and subject areas readers will learn how to take a student perspective and view assessment questions and tasks as problems to solve design multiple choice questions that require higher order thinking understand the difference between open and closed questions and how to use open questions effectively vary and control the features of performance assessment tasks including cognitive level and difficulty to target different thinking skills and manage the assessment of higher order thinking within the larger context of teaching and learning Brookhart also provides an idea bank that teachers can use to jump start their own thinking as they create assessments Timely and practical *How to Design Questions and Tasks to Assess Student Thinking* is essential reading for 21st century teachers who want their students to excel in the classroom and beyond

Procedures for Including Human Engineering Factors in the Development of Weapon Systems Harold P. Van Cott, James William Altman, 1958 At each stage in the development of a new weapon system appropriate action must be taken regarding the eventual role which men will play in operating and maintaining the completed system The use of systematic procedures for solving problems and making decisions with respect to these human engineering factors and for articulating them with other aspects of system development assures that the weapon system

emerges as a maximally effective man machine system This report is intended to suggest systematic procedures for the human engineering of developmental weapon systems A brief discussion of man machine systems and the role of human engineering in their design is followed by a design schedule This schedule suggests at what points and in what ways human engineering should be accomplished Following the design schedule procedures that may be used to assess and solve human engineering problems are suggested Finally human capabilities and limitations are discussed from the point of view of the man as a system component Abstract **Houghton Mifflin Math Central: Student text** ,1998 **Advances in**

Lajoie,2012-10-12 An issue in the current push for reform in mathematics education is the call to address statistics at the precollege level This volume represents the emerging findings of an interdisciplinary collaboration among a group of mathematics educators cognitive scientists teachers and statisticians to construct an understanding of how to introduce statistics education and assessment

for students in elementary and secondary schools A premise shared by the contributors to this volume is that when students are introduced to statistics at the K 12 level and provided with opportunities to do statistics that are related to actual life situations they will be better prepared for decision making in the real world The interdisciplinary nature of the group of researchers stimulated a lively interchange of ideas for enhancing the learning teaching and assessment of statistical understanding which is reflected in this volume Mathematics educators contribute their insights into how teachers teach mathematical ideas and heighten our awareness of the ecological needs of the current mathematics classroom Cognitive scientists share their understanding of developmental differences in learning and present theoretical perspectives that contribute to the design of effective learning environments Classroom teachers share their ideas about classroom activities and assessment of student learning as well as their concerns for in service training and workshops to help teachers acquire skills in this new content area Statisticians offer their understanding of what is feasible to teach in the early grades and what their view is of statistical literacy The book is organized around four interdependent themes content teaching learning and assessment By focusing their respective chapters on particular themes the authors intend to cultivate a better understanding of how each relates to improvements in statistics education This is the first book to address statistics learning in grades K 12 address issues of statistical curriculum content in grades K 12 address issues of assessment of statistics learning in grades K 12 bring issues of technology instruction and assessment in statistics education in grades K 12 and look at teacher education for statistics instruction in grades K 12 This is a must read book for both practitioners and researchers involved in K 12 mathematics education
