Collection of Performance Tasks & Rubrics: High School Mathematics Charlotte Danielson, Elizabeth

Marquez, 2014-05-22 This book provides a collection of performance tasks and scoring rubrics for a number of important topics in high school mathematics Included are many samples of student work which clarify the tasks and anchor the points of the scoring rubrics *Developing Assessments for the Next Generation Science Standards* National Research

Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Board on Testing and Assessment, Committee on Developing Assessments of Science Proficiency in K-12, 2014-05-29 Assessments understood as tools for tracking what and how well students have learned play a critical role in the classroom *Developing Assessments for the Next Generation Science Standards* develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in *A Framework for K 12 Science Education Framework and Next Generation Science Standards NGSS* These documents are brand new and the changes they call for are barely under way but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education The new Framework and the NGSS are designed to guide educators in significantly altering the way K 12 science is taught The Framework is aimed at making science education more closely resemble the way scientists actually work and think and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time It structures science education around three dimensions the practices through which scientists and engineers do their work the key crosscutting concepts that cut across disciplines and the core ideas of the disciplines and argues that they should be interwoven in every aspect of science education building in sophistication as students progress through grades K 12 *Developing Assessments for the Next Generation Science Standards* recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support

an assessment system that fully meets that vision The report offers a systems approach to science assessment in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction assessments designed to monitor science learning on a broader scale and indicators designed to track opportunity to learn New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students

Designing Assessment for Mathematics Second Edition demonstrates how to drive instruction and successfully boost achievement levels by providing students with experiences that impact their learning and performance **In Search of Synergy in Small Group Performance** James R. Larson, Jr.,2013-01-11 This volume critically evaluates more than a century of empirical research on the effectiveness of small task performing groups and offers a fresh look at the costs and benefits of collaborative work arrangements The central question taken up by this book is whether and under what conditions interaction among group members leads to better performance than would otherwise be achieved simply by combining the separate efforts of an equal number of people who work independently This question is considered with respect to a range of tasks idea generation problem solving judgment and decision making and from several different process perspectives learning and memory motivation and member diversity As a framework for assessing the empirical literature the book introduces the concept of synergy Synergy refers to an objective gain in performance that is attributable to group interaction Further it distinguishes between weak and strong synergy which are performance gains of different magnitude The book highlights the currently available empirical evidence for both weak and strong synergy identifies the conditions that seem necessary to produce each and suggests where the search for synergy might best be directed in the future The book is at once a high level introduction to the field a review of the field s history and a scholarly critique of the current state of the art As such it is essential reading for graduate students advanced undergraduate students and researchers interested in group dynamics generally and small group performance in particular *Quantitative Reasoning in the Context of Energy and Environment* Robert Mayes,James Myers,2015-01-19 This book provides professional development leaders and teachers with a framework for integrating authentic real world performance tasks into science technology engineering and mathematics STEM classrooms We incorporate elements of problem based learning to engage students around grand challenges in energy and environment place based leaning to motivate students by relating the problem to their community and Understanding by Design to ensure that understanding key concepts in STEM is the outcome Our framework has as a basic tenet interdisciplinary STEM approaches to studying real world problems We invited professional learning communities of science and mathematics teachers to bring multiple lenses to the study of these problems including the sciences of biology chemistry earth systems and physics technology through data collection tools and computational science modeling approaches engineering design around how to collect data and mathematics through quantitative reasoning Our goal was to have teachers create opportunities for their students to engage in real world problems impacting their place problems that could be related to STEM grand challenges demonstrating the importance and utility of STEM We want to broaden the participation of students in STEM which both increases the future STEM workforce providing our next generation of

scientists technologists engineers and mathematicians as well as producing a STEM literate citizenry that can make informed decisions about grand challenges that will be facing their generation While we provide a specific example of an interdisciplinary STEM module we hope to do more than provide a single fish Rather we hope to teach you how to fish so you can create modules that will excite your students
