

Using The Periodic Table

C - Introduction to the Periodic Table

60 a. Using the blank Periodic Table provided & your understanding of atomic number, describe how the elements are listed on the Periodic table.

b. Using the Periodic Table to the right, draw a circle around a "group", and fill in one "period".

c. Based on the evidence we have gathered from scientific research, what do we know about elements that are found in the same group on the Periodic Table?

70 Give the symbol and atomic number for each of the following elements and indicate whether each element is a metal, or a nonmetal, and whether they are members of a named group/family on the Periodic Table.

Name	Symbol	Atomic Number	Metal or Nonmetal	Group/Family Name
Argon				
Chlorine				
Barium				
Cesium				

80 Based on your knowledge of the Periodic Table and the natural states that elements occur in, provide an example of:

- An element referred to as a noble gas -
- An element that naturally occurs as a diatomic molecule -
- An element that occurs as a solid at room temperature -
- An element that occurs as a liquid at room temperature -
- An element that occurs as a gas at room temperature -

Ions & Their Compounds

90 Why does an atom have a zero net charge?

100 Ions are formed by an atom gaining or losing _____.

110 Metals naturally form what type of ion? Nonmetals? Provide definitions for each type of ion.

120 Describe what happens to:

- the size of an atom when it loses an electron

832KB *Survival Guide to General Chemistry* Patrick E. McMahon, Rosemary McMahon, Bohdan Khomtchouk, 2019-02-13

This work evolved over thirty combined years of teaching general chemistry to a variety of student demographics. The focus is not to recap or review the theoretical concepts well described in the available texts. Instead, the topics and descriptions in this book make available specific detailed step by step methods and procedures for solving the major types of problems in general chemistry. Explanations, instructional process sequences, solved examples, and completely solved practice problems are greatly expanded, containing significantly more detail than can usually be devoted to in a comprehensive text. Many chapters also provide alternative viewpoints as an aid to understanding. Key Features: The authors have included every major topic in the first semester of general chemistry and most major topics from the second semester. Each is written in a specific and detailed step by step process for problem solving, whether mathematical or conceptual. Each topic has greatly expanded examples and solved practice problems containing significantly more detail than found in comprehensive texts. Includes a chapter designed to eliminate confusion concerning acid base reactions, which often persists through working with acid base equilibrium. Many chapters provide alternative viewpoints as an aid to understanding. This book addresses a very real need for a large number of incoming freshmen in STEM fields.
