Explaining general concepts of atomic structure and chemical bond, the book covers all advanced topics such as acid base theory, concentration of solutions, electrochemistry, corrosion, metallurgy, hydrocarbons, sources of water and its treatment, lubricants and adhesives, fuel, polymer and environmental chemistry. Each theoretical concept is well supported by illustrative examples. Besides the book provides a large number of solved problems to reinforce the theoretical understanding of concepts. Each chapter contains glossary terms and provides short questions and long questions for practice. Previous year question papers and model questions with answers are appended at the end of the book to help students ace in examinations.

Pauli spent 30 years as a professor at the Federal Institute of Technology ETH in Zurich which occupies a central place in this biography. It would be incomplete, however, without a rendering of Pauli's sarcastic wit and most importantly of the world of his dreams. It is through the latter that quite a different aspect of Pauli's life comes in, namely his association with the psychology of C. G. Jung and his school.
