

Moon Note-Taking Guide

Why do we see the same face of the moon?

Although the moon takes about 29.5 days to orbit the Earth, we always see the same side of the moon. This is because the moon rotates around its axis at the same rate as it orbits the Earth. As the moon orbits the Earth, it also rotates so that the same side of the moon is always facing the Earth. This is called "synchronous rotation".

The moon's rotation is synchronized with its orbit around the Earth. This means that the moon always shows the same face to the Earth. The moon's rotation period is approximately 29.5 days, which is the same as its orbital period. This is why we always see the same side of the moon from Earth.

The Moon

The moon is the only natural satellite of Earth. It is a rocky body that orbits the Earth. The moon is about 1/4 the size of the Earth. It is the only celestial body in the solar system that we can see with the naked eye. The moon is also the only celestial body in the solar system that we can see from the Earth.
