 R. Richard, 2022-03-31 This book is a friendly and complete introduction to one of the most comprehensive contemporary
 theories of mathematics teaching and learning By focusing on mathematical work performed by students and teachers during
 mathematics session the theory of Mathematical Workings Spaces MWS has opened up new perspectives and avenues on
 mathematics education and mathematical thinking In particular it enables the identification of students knowledge
 production processes and helps teachers to shape them The first part of the book explores the heart of the theory and aims to
 further describe and understand epistemological and cognitive aspects of mathematical work The second part develops the
 different MWS dedicated to observing how this work depends on the expectations of educational systems how it is formed
 and taught and how individuals appropriate it In the last part some applications and perspectives are discussed regarding
 topics of major importance today in mathematics education which relate to technological and digital tools teacher training
 and modeling activities In line with the spirit of the theory the book was written to reflect the conceptual unity at the heart of
 the theory of MWS and at the same time to show the freedom and diversity of approaches given space therein Written for
 researchers and professionals in mathematics education it offers plenty of concrete examples from different educational
 systems around the world to illustrate the theoretical concepts and show the applicability of the theory to practice and
