Section: Conventional Fire Alarm Control Panels

GENERAL

The NOTIFIER System 500 fire alarm control panel is a medium-sized system designed for maximum flexibility and ease of installation. The microprocessor control and modular construction enable users to configure the system to meet precise requirements. Field programmability simplifies initial installation and allows quick updates to meet future needs.

The center of the system is the Central Processor Unit (CPU-500) module which monitors and controls one or two additional user-selected modules. The System 500 may be configured as a 4, 8, 12, or 16-zone system. In addition, up to eight control points may be added, creating a maximum capacity of 48 points (16 zones and 12 output circuits).

Internal communications are accomplished over a high-speed serial data bus. Each module on the bus is automatically addressed, supervised and controlled by the CPU-500.
