Complex Problem Solving Peter A. Frensch, Joachim Funke, 2014-04-04 This volume presents a state of the science review of the most promising current European research and its historic roots of research on complex problem solving CPS in Europe It is an attempt to close the knowledge gap among American scholars regarding the European approach to understanding CPS Although most of the American researchers are well aware of the fact that CPS has been a very active research area in Europe for quite some time they do not know any specifics about even the most important research Part of the reason for this lack of knowledge is undoubtedly the fact that European researchers for the most part have been rather reluctant to publish their work in English language journals The book concentrates on European research because the basic approach European scholars have taken to studying CPS is very different from one taken by North American researchers Traditionally American scholars have been studying CPS in natural domains physics reading writing and chess playing concentrating primarily on exploring novice expert differences and the acquisition of a complex skill European scholars in contrast have been primarily concerned with problem solving behavior in artificially generated mostly computerized complex systems While the American approach has the advantage of high external validity the European approach has the advantage of system variables that can be systematically manipulated to reveal the effects of system parameters on CPS behavior The two approaches are thus best viewed as complementing each other This volume contains contributions from four European countries Sweden Switzerland Great Britain and Germany As such it accurately represents the bulk of empirical research on CPS which has been conducted in Europe An international cooperation started two years ago with the goal of bringing the European research on complex problem solving to the awareness of American scholars A direct result of that effort the contributions to this book are both informative and comprehensive

Work Activity Studies Within the Framework of Ergonomics, Psychology, and Economics Gregory Z. Bedny, Inna S. Bedny, 2018-09-21

Systemic structural activity theory (SSAT) founded by Gregory Bedny is a relatively new unified framework for the study of efficiency of human performance, equipment and software design. This book presents new, recently obtained data in the field of SSAT that can be used in the study of efficiency and complexity of human performance. With increased cognitive demands to task performance, psychological methods of study of human activity play an important role. New principles and revised methods for the study of human work are supplemented by practical examples in manufacturing, construction, industry, aviation and human-computer interaction.

Features: Presents new SSAT data. Offers for the first time comparative analysis of studying efficiency and productivity from the perspective of ergonomics, psychology and economics. Includes examples of evaluation of economic efficiency of ergonomic innovations. Provides advanced self-regulative models of activity and of all cognitive processes that describe strategies of task performance. Introduces a new efficient method of morphological and analytical quantitative analysis. Discusses new methods of evaluation of complexity and reliability of highly variable computerized and computer-based tasks.

Work Activity Studies Within the Framework of Ergonomics, Psychology and Economics presents a comprehensive unified psychological theory that can be utilized as a general approach to the study of human activity not only for ergonomists and psychologists but also for economists that study the efficiency of human performance.

Nutritional Cognitive Neuroscience Research at the Crossroads of Nutrition, Psychology, and Neuroscience Aron K. Barbey, Elizabeth J. Johnson, Margaret Joy Dauncey, 2019-01-23

Nutritional Cognitive Neuroscience is an emerging interdisciplinary field of

research that seeks to understand nutrition's impact on human cognition and brain health across the life span Research in this burgeoning field demonstrates that many aspects of nutrition from entire diets to specific nutrients affect brain structure and function and therefore have profound implications for understanding the nature of psychological health aging and disease The aim of this Research Topic in Frontiers in Aging Neuroscience is to examine recent empirical and theoretical contributions from Nutritional Cognitive Neuroscience with an emphasis on the following primary areas of inquiry Nutrition and Brain Health An enduring aim of research in the nutritional sciences is to discover specific nutrients and dietary patterns that enhance cognitive function and brain health in the elderly Although an abundance of evidence supports a single or a few nutrients for the promotion of cognitive performance and brain health clinical trials using nutritional supplementation have been predominately unsuccessful Further research is therefore needed to better characterize the contributions of specific nutrients and nutrient combinations to cognitive performance and brain health Moderators of Nutrition's Impact on the Brain A second major area of research in Nutritional Cognitive Neuroscience investigates the mechanisms that underlie the effects of nutrition on brain health at the cellular molecular and circuit levels Accumulating evidence indicates that the effects of nutrition on brain health are complex and multifactorial reflecting the influence of particular nutrient combinations on specific brain networks and taking into account several moderating factors Considerably more research is needed to elucidate the complex interactions between nutrition and known moderating variables including age nutritional status genes environment and lifestyle in determining nutrition's impact on cognitive function and brain health Personalized Nutrition Research at the frontiers of Nutritional Cognitive Neuroscience establishes a personalized approach to nutritional intervention that takes into account individual variability in nutritional status brain health genes environment and lifestyle The goal of personalized nutrition is to enhance the precision of nutritional intervention and to enable novel applications to psychological health aging and disease
