centers on empathy compassion and being proactive This collection of diverse essays is the first book devoted to compassionate conservation a growing global movement that translates discussions and concerns about the well being of individuals species populations and ecosystems into action Written by leading scholars in a host of disciplines including biology psychology sociology social work economics political science and philosophy as well as by locals doing fieldwork in their own countries the essays combine the most creative aspects of the current science of animal conservation with analyses of important psychological and sociocultural issues that encourage or vex stewardship The contributors tackle topics including the costs and benefits of conservation behavioral biology media coverage of animal welfare conservation psychology and scales of conservation from the local to the global Taken together the essays make a strong case for why we must replace our habits of domination and exploitation with compassionate conservation if we are to make the world a better place for nonhuman and human animals alike

Technique Jill Chamberlain,2016-03-01 Veteran script consultant Jill Chamberlain discovered in her work that an astounding 99 percent of first time screenwriters don t know how to tell a story These writers may know how to format a script write snappy dialogue and set a scene They may have interesting characters and perhaps some clever plot devices But invariably while they may have the kernel of a good idea for a screenplay they fail to tell a story What the 99 percent do instead is present a situation In order to explain the difference Chamberlain created the Nutshell Technique a method whereby writers identify eight dynamic interconnected elements that are required to successfully tell a story Now for the first time Chamberlain presents her unique method in book form with *The Nutshell Technique Crack the Secret of Successful Screenwriting* Using easy to follow diagrams nutshells she thoroughly explains how the Nutshell Technique can make or break a film script Chamberlain takes readers step by step through thirty classic and contemporary movies showing how such dissimilar screenplays as *Casablanca Chinatown Pulp Fiction The Usual Suspects Little Miss Sunshine Juno Silver Linings Playbook* and *Argo* all have the same system working behind the scenes and she teaches readers exactly how to apply these principles to their own screenwriting Learn the Nutshell Technique and you ll discover how to turn a mere situation into a truly compelling screenplay story

Climate Change Ethics and the Non-Human World Brian G. Henning,Zack Walsh,2020-02-25 This book examines from different perspectives the moral significance of non human members of the biotic community and their omission from climate ethics literature The complexity of life in an age of rapid climate change demands the development of moral frameworks that recognize and respect the dignity and agency of both human and non human organisms Despite decades of careful work in non anthropocentric approaches to environmental ethics recent anthologies on climate ethics have largely omitted non anthropocentric approaches This multidisciplinary volume of international scholars tackles this lacuna by presenting novel work on non anthropocentric approaches to climate ethics Written in an accessible style the text incorporates sentiocentric biocentric and ecocentric perspectives on climate change With diverse perspectives

from both leading and emerging scholars of environmental ethics geography religious studies conservation ecology and environmental studies this book will offer a valuable reading for students and scholars of these fields **A God Who Cares?** Ernst Conradie, 2025-02-26 This monograph may be read as a constructive supplement to Volume 4 of the series entitled *An Earthed Faith Telling the Story amid the Anthropocene* Volume 4 of this series is on the Christian doctrine of providence and is entitled *Making Room for the Story to Continue* In addition to an extended introduction on the state of the debate in the field this monograph includes three constructive essays on the doctrine of providence employing the traditional Reformed distinction between *conservatio gubernatio* and *concursus* as aspects of God's providence as well as a concluding essay provocatively entitled *Who Cares a Damn* The argument of this contribution may be captured in the following way 1 That God's providence is best understood in terms of the deeply held Christian conviction that God cares for every creature and not in terms of Greek assumptions around a pervading rational world order 2 That *conservatio* and *gubernatio* have found rough secular equivalents in global debates on sustainability mitigation and adaptation in the context of climate change 3 That *conservatio* and *gubernatio* are typically in tension with each other when it comes to the question whether God maintains order in nature and society or whether God transforms unjust orders the call for ecojustice 4 That *concursus* is not only an implication of *conservatio* and *gubernatio* but also captures the heart of the problem posed by the advent of the Anthropocene namely that some humans have become a geological force of nature while God's agency has become sidelined or usurped by the Promethean quest to become divine In each of these essays a highly constructive contribution is offered that advances the debate in eco theology by placing providence in the context of the shift from the Holocene to the Anthropocene The method adopted is a constructive argument based on a critical review of the available literature This monograph is scholarly and is addressed to other scholars in the fields of eco theology systematic theology and Reformed theology **The Oxford Handbook of Environmental Ethics** Stephen Mark Gardiner, Allen Thompson, 2017 We live during a crucial period of human history on Earth Anthropogenic environmental changes are occurring on global scales at unprecedented rates Despite a long history of environmental intervention never before has the collective impact of human behaviors threatened all of the major bio systems on the planet Decisions we make today will have significant consequences for the basic conditions of all life into the indefinite future What should we do How should we behave In what ways ought we organize and respond The future of the world as we know it depends on our actions today A cutting edge introduction to environmental ethics in a time of dramatic global environmental change this collection contains forty five newly commissioned articles with contributions from well established experts and emerging voices in the field Chapters are arranged in topical sections social contexts history science economics law and the Anthropocene who or what is of value humanity conscious animals living individuals and wild nature the nature of value truth and goodness practical reasons hermeneutics phenomenology and aesthetics how things ought to matter consequences duty and obligation character traits

the most faithful expression of the current zeitgeist Insofar as the Anthropocene establishes that the human agency as technological omni power represents a global geophysical force capable of altering the destiny of the Earth system the coming of this new epoch shows that technology now embodies the subject of both history and nature In this totalized form technology achieves the status of an integral epochal phenomenon the new environment for human life Agostino Cera argues that the technisches Zeitalter age of technology outlined by twentieth century philosophical thought is fully realized in the Anthropocene and that a more appropriate name for this planetary framework is therefore Technocene The book develops along four basic directions epistemological ontological anthropological and ethical It argues that the Anthropocene is something radically new a terra incognita or an epistemic hyperobject with a geo historical barycenter giving rise to an unprecedented form of reification of nature pet ification of nature an unexpected version of anthropocentrism Aidosean Prometheanism and an unpredictable ethical paradox paradox of omni responsibility *Critical Memory Studies* Brett Ashley Kaplan, 2023-04-06 Bringing together a diverse array of new and established scholars and creative writers in the rapidly expanding field of memory studies this collection creatively delves into the multiple aspects of this wide ranging field Contributors explore race ing memory environmental studies and memory digital memory monuments memorials and museums and memory and trauma Organised around 7 sections this book examines memory in a global context from Kashmir and Chile to the US and UK Featuring contributions on topics such as the Black Lives Matter movement the AIDS crisis and memory and the anthropocene this book traces and consolidates the field while analysing and charting some of the most current and cutting edge work as well as new directions that could be taken **Security in Crisis** Columba Peoples, 2024-09-19 The concept of crisis is a recurrent staple in representations of modern forms of insecurity from nuclear proliferation to cyber security armed conflict the instability of political institutions from pandemics to risks of social and financial collapse Amidst this seeming ubiquity and ever presence the onset of climate and ecological emergencies as potential planetary scale threats to the habitability of the Earth raise particularly urgent questions for how we conceive of and deal with crisis insecurity How these forms of planetary insecurity come to be known understood and managed is thus of pressing importance *Security in Crisis* seeks to provide an analysis of the complex combinations of political and technological understandings entailed in what it terms as planetary crisis management Arguing that the emergence scope and scale of planetary insecurity and crisis management challenge traditional disciplinary boundaries of the study of International Relations and security the book adopts an interdisciplinary outlook It integrates ideas and approaches from across political theory and anthropology on conceptions of crisis including climate science and the wider study of environment and ecology in the Anthropocene on planetary insecurities and ideas of geoengineering science and technology studies on the technopolitics of crisis management and the sociotechnical imagination of planetary futures and critical security studies on critical approaches to the international and to security In the process the book considers how technopolitical fixes for
