Teramoto,1993-05-10 This volume comprises the final report of the research project entitled the Dynamics of the Deep Ocean Circulation The layered structure of the subsurface circulation which had been predicted in the hypothetical model proposed prior to the research is verified through Eulerian and Lagrangian measurements of current By the use of the numerical model the deep circulation of the Philippine Sea which has been long supposed to be isolated from the North Pacific is revealed to be derived in close association with that of the latter ocean Behavior of the deep current around the equator is also clarified by numerical modeling By the extensive use of sediment trapping technology it becomes clear that sinking sediments play an important role in the distribution of chemical substances in the deep ocean Graduate students in the field of oceanography will find this a good textbook *International Decade of Ocean Exploration* United States. life while addressing environmental challenges Written with urgency and optimism Ten Thousand Central Parks offers a fresh perspective on the climate crisis rejecting doom in favor of possibility We need projects on the scale of Central Park thousands of them to meet today s environmental challenges This book a boundary crossing work of narrative nonfiction is an invitation to think big act boldly and embrace radical hope **Time** Briton Hadden, Henry R.
