Plant Life Cycles

FROM SEED TO TREE

Every plant begins its life as a tiny seed. The seed contains all the information needed for the plant to grow. When the seed is planted in the soil, it begins to grow. The first stage is the seedling, which has two small leaves. As the seedling grows, it develops roots and a stem. The seedling then grows into a sapling, which has a thicker stem and larger leaves. Finally, the sapling grows into a mature tree, which has a thick trunk and many leaves. The tree then produces more seeds, which can be planted in the soil to start the cycle again.
