Brain-Mind-Body Practice and Health Yi-Yuan Tang, 2018-01-09 It is acknowledged that practice could induce rapid change or reorganization of the brain's cellular or neural networks as well as behaviors. Notably practice relevant to mental or physical approach attracted great attention in this decade. It highlights profound significance both for human evolution and individual development. Specifically acquiring fine motor skills is a crucial premise for human being to evolve to modern human by using tools in one side. In the other side numerous evidences indicated that motor learning involved in limb and trunks promotes the development of individual brain in anatomy and functions. Hence motor learning is also tightly associated with developmental plasticity. These studies on brain mind body practice illuminate a promising way in promoting human brain health. This editorial covers wide range of brain mind body practice forms to summarize recent new findings and development from behavioral physiological neurobiological and psychological science approaches. In this research topic we addressed recent findings from theoretical as well as experimental perspective including contributions under the following three headings: 1 intervention studies to investigate the positive effect of brain mind body practice on cognition and relevant brain mechanism. The intervention pattern consisted of short term practice ranging from few hours to several weeks. 2 cross sectional studies using expert novice paradigm to explore the behavioral and neural system change induced by extensive brain mind body practice. 3 the mediators influence the relationship between practice and health outcomes and 4 new

viewpoints on brain mind body practice from theoretical perspectives Here we briefly highlight these articles aiming to provide a deep understanding for the association between practice plasticity and health for readers Additionally it offers new insights for developing possible practice interventions for clinical treatment of neurological dysfunction or disorders

Mapping Scientific Method Gita Chadha,Renny Thomas,2022-07-19 This volume explores how the scientific method enters and determines the dominant methodologies of various modern academic disciplines It highlights the ways in which practitioners from different disciplinary backgrounds the humanities the natural sciences and the social sciences engage with the scientific method in their own disciplines The book maps the discourse within each of the disciplines that critiques the scientific method from different social locations in order to argue for more complex and nuanced approaches in methodology It also investigates the connections between the method and the structures of power and domination which exist within these disciplines In the process it offers a new way of thinking about the philosophy of the scientific method Part of the Science and Technology Studies series this volume is the first of its kind in the South Asian context to debate scientific methods and address questions by scholars based in the global south It will be useful to students and practitioners of science humanities social sciences philosophy of science and philosophy of social science Research scholars from these disciplines especially those engaging in interdisciplinary research will also benefit from this volume Metaphysics of Science Markus

Schrenk,2016-08-12 Metaphysics and science have a long but troubled relationship In the twentieth century the Logical Positivists argued metaphysics was irrelevant and that philosophy should be guided by science However metaphysics and science attempt to answer many of the same fundamental questions What are laws of nature What is causation What are natural kinds In this book Markus Schrenk examines and explains the central questions and problems in the metaphysics of science He reviews the development of the field from the early modern period through to the latest research systematically assessing key topics including dispositions counterfactual conditionals laws of nature causation properties natural kinds essence necessity With the addition of chapter summaries and annotated further reading *Metaphysics of Science* is a much needed clear and informative survey of this exciting area of philosophical research It is essential reading for students and scholars of philosophy of science and metaphysics *Sense of Agency: Examining Awareness of the Acting Self* Nicole

David,James W Moore,Sukhvinder Obhi,2015-07-24 The sense of agency is defined as the sense of oneself as the agent of one's own actions This also allows oneself to feel distinct from others and contributes to the subjective phenomenon of self consciousness Gallagher 2000 Distinguishing oneself from others is arguably one of the most important functions of the human brain Even minor impairments in this ability profoundly affect the individual's functioning in society as demonstrated by psychiatric and neurological syndromes involving agency disturbances Della Sala et al 1991 Franck et al 2001 Frith 2005 Sirigu et al 1999 But the sense of agency also plays a role for cultural and religious phenomena such as voodoo superstition and gambling in which individuals experience subjective control over objectively uncontrollable entities Wegner 2003

Furthermore it plays into ethical and law questions concerning responsibility and guilt For these reasons a better understanding of the sense of agency has been important for neuroscientists clinicians philosophers of mind and the general society alike Significant progress has been made in this regard For example philosophical scrutiny has helped establish the conceptual boundaries of the sense of agency Bayne 2011 Gallagher 2000 2012 Pacherie 2008 Synofzik et al 2008 and scientific investigations have shed light on the neurocognitive basis of sense of agency including the brain regions supporting sense of agency Chambon et al 2013 David et al 2007 Farrer et al 2003 2008 Spengler et al 2009 Tsakiris et al 2010 Yomogida et al 2010 Despite this progress there remain a number of outstanding questions such as Are there cross cultural differences in the sense of agency How does the sense of agency develop in infants or change across the lifespan How does social context influence sense of agency What neural networks support sense of agency i e connectivity and communication between brain regions What are the temporal dynamics with respect to neural processes underlying the sense of agency i e the what and when of agency processing How can different cue models of the sense of agency be further specified and empirically supported especially with regards to cue integration weighting What are the applications of sense of agency research clinically engineering etc The concept of the sense of agency offers intriguing avenues for knowledge transfer across disciplines and interdisciplinary empirical approaches especially in addressing the afore mentioned outstanding questions The aim of the present research topic is to promote and facilitate such interdisciplinarity for a better understanding of why and how we typically experience our own actions so naturally and undoubtedly as ours and what goes awry when we do not We thus welcome contributions from for example i neuroscience and psychology including development psychology neuroscience ii psychiatry and neurology iii philosophy iv robotics and v computational modeling In addition to empirical or scientific studies of the sense of agency we also encourage theoretical contributions including reviews models and opinions
