Thomson's view has brought us to "atomism again." Interestingly Thomson's atomism, despite its classical background, differs from the young Thomson's plan. Thus, when Thomson published his famous "model" in 1904, he had abandoned the idea of electrons as material. On the other hand, Thomson is credited as introducing "subatomic" life. In Thomson's it is only matter that does not get investigated by physics and accordingly, matter is not made, but is made right at the beginning of existence.

Abstract: This paper presents a novel method for representing and reasoning about spatial relationships in a 2D environment. The method is based on a set of spatial relationships that are defined in terms of the relative positions of objects in the environment. The method is able to represent and reason about spatial relationships in a 2D environment in a way that is both efficient and effective.
