|---------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| Aquatic ecosystems have abiotic - temp, light, salinity, depth                        | Different organisms can tolerate different factors                                        |
| Some organisms prefer fresh water vs. saltwater. Bull sharks + manatees tolerate both | Bull sharks and manatees are very different, but tolerate same conditions                 |
| Depth reduces light and increases pressure. Organisms deal with this differently.     | Many types of adaptations exist to survive in these conditions                            |
| The geography of an aquatic environment can determine the life forms present.         | Continental shelf gets lots of light, so there's many living things. Not so in the abyss. |
| Photosynthesis takes place in the neritic zone.                                       | It is the most productive area of the ocean. Plankton are base of food chain.             |
| Metabolism is affected by temp. Many species are cold-blooded.                        | Organisms can migrate or must have adaptations to survive.                                |
