Low-Power CMOS Digital Pixel Imagers for High-Speed Uncooled PbSe IR Applications Josep Maria Margarit, 2016-12-29
This book describes the development of a new low cost medium wavelength IR MWIR monolithic imager technology for high speed uncooled industrial applications. It takes the baton on the latest technological advances in the field of vapor phase deposition VPD PbSe based MWIR detection accomplished by the industrial partner NIT S L adding fundamental knowledge on the investigation of novel VLSI analog and mixed signal design techniques at circuit and system levels for the development of the readout integrated device attached to the detector. In order to fulfill the operational requirements of VPD PbSe this work proposes null inter pixel crosstalk vision sensor architectures based on a digital only focal plane array FPA of configurable pixel sensors. Each digital pixel sensor DPS cell is equipped with fast communication modules self biasing offset cancellation analog to digital converter ADC and fixed pattern noise FPN correction. In pixel power consumption is minimized by the use of comprehensive MOSFET subthreshold operation. *Materials for Solid State Lighting and Displays* Adrian Kitai, 2016-12-15 LEDs are in the midst of revolutionizing the lighting industry. Includes inorganic and organic materials and devices. LEDs offer high efficiency long life and mercury free lighting solutions. **Physical Model and Applications of High-Efficiency Electro-Optical Conversion Devices - Volume II** Feng Chi, Qiang Xu, Dan Luo, 2023-03-31 MH-SET Paper 1 Guide for Assistant Professor with Past Questions Disha Experts, 2020-02-29 Visible Light Communications Zhaocheng Wang, Qi Wang, Wei Huang, Zhengyuan Xu, 2017-12-08 A complete and comprehensive reference on modulation and signal processing for visible light communication. This informative new book on state of the art visible light communication VLC provides for the first time a systematical and advanced treatment of modulation and signal processing for VLC. Visible Light Communications Modulation and Signal Processing offers a practical guide to designing VLC linking academic research with commercial applications. In recent years VLC has attracted attention from academia and industry since it has many advantages over the traditional radio frequency including wide unregulated bandwidth high security and low cost. It is a promising complementary technique in 5G and beyond wireless communications especially in indoor applications. However lighting constraints have not been fully considered in the open literature when considering VLC system design and its importance has been underestimated. That's why this book written by a team of experts with both academic research experience and industrial development experience in the field is so welcome. To help readers understand the theory and design of VLC systems the book details many modern techniques on both modulation and signal processing aspects. Links academic research with commercial applications in visible light communications as well as other wireless communication systems. Combines theoretical rigor with practical examples in presenting optical camera communication systems. Visible Light Communications Modulation and Signal

Processing serves as a useful tool and reference book for visible light communication professionals as well as wireless communication system professionals and project managers. It is also an important guide for undergraduates and graduates who want to conduct research in areas of wireless communications.

Sensing Advances in Biodiversity and Ecosystem Functioning Research Zhouyuan Li, Weiwei Sun, Yanjie Xu, Jixi Gao, Shijia Peng, 2024-02-06 Different dimensions of biodiversity are increasingly appreciated as critical for maintaining the functions of ecosystems and their services to humans. More recently, with the emergence of functional biogeography, functional diversity is of particular interest due to its strong links with ecosystem processes such as carbon, water, and energy exchange and climate mitigation. The multi-form diversity varies in space and time. Understanding this variation across scales is important for tracking the resilience of Earth's ecosystem, and the information on the ecosystem structural features provides necessary foundations for monitoring, predicting the ecosystem functioning patterns and process of ecosystems from individual unit to its whole in a holistic manner. In recent years, the high-resolution, high-throughput, non-intrusive, and large-scale data on biodiversity monitoring and measurement are becoming a new trend toward enhancing the efficiency and coherency in ecological discovery. Still, the available multi-scale data on multi-dimensional diversity are incomplete and non-representative taxonomically, geographically, and temporally. Although the studies on functional traits and their relations with function continue to grow, local observations on functional traits are limited. Recently, remote sensing has proved to be a critical technology for addressing this research gap. Air- and satellite-borne spectrometers at different levels could develop novel diversity measurements and alternatives.
