Lindstrom, 2024-06-25 Challenging mainstream architecture s understandings of place this book offers an illuminating

clarification that allows the idea's centrality in all aspects of everyday design thinking to be rediscovered or considered for the first time. Rigorous but not dense, practical but not trivialising, the book unfolds on three fronts. First it clearly frames the pertinent aspects of topology, the philosophy of place, importantly differentiating two concepts that architecture regularly conflates: place and space. Second it rejects the ubiquitous notion that architecture makes place and instead reasons that place is what makes architecture and the built environment possible; that place calls for and to architecture and that architecture is thus invited to listen and respond. Finally it turns to the matter of designing responses that result not just in more places of architecture demanding little of design nor merely in architecture with some sense of place demanding little more but rising above those responses that constitute an architecture of place demanding the greatest vigilance but offering the utmost freedom. Opening up a term regarded as so common that its meaning is seldom considered, the author reveals the actual depth and richness of place, its innateness to architecture and its essentiality to practitioners, clients, educators and students including those in all spatial disciplines.

ICT in the Primary School Gary Beauchamp, 2013-11-26 This invaluable new text on ICT offers support, guidance and inspiration to anyone training to teach or currently teaching in primary schools as well as those studying Education Studies at undergraduate or postgraduate level. The book encourages teachers and pupils to realise the potential of the full range of ICT resources. It provides primary teachers with the knowledge, skills and confidence to plan, teach and assess their own ICT lessons as well as to use ICT creatively across the whole curriculum. This is not a how-to guide or collection of lesson plans but instead balances research-based theory with everyday experiences, challenging you to understand teaching methods and how they translate into a range of suitable teaching strategies for the whole class, small group or individual using ICT.

Transformations of Urban and Suburban Landscapes Gary Backhaus, John Murungi, 2002-01-01 The study of landscape and place has become an increasingly fertile realm of inquiry in the humanities and social sciences. In this new book of essays selected from presentations at the first annual meeting of the Society for Philosophy and Geography, scholars investigate the experiences and meanings that inscribe urban and suburban landscapes. Gary Backhaus and John Murungi bring philosophy and geography into a dialogue with a host of other disciplines to explore a fundamental dialectic while our collective and personal activity modifies the landscape; in turn the landscape modifies human identities and social and environmental relations. Whether proposing a peripatetic politics, conducting a sociological analysis of building security systems or critically examining the formation of New York City's municipal parks, each essay sheds distinctive light on this fascinating and engaging aspect of contemporary environmental studies.

The Timespace of Human Activity Theodore R. Schatzki, 2010-04-12 This book shows that a concept of activity timespace drawn from the work of Martin Heidegger provides new insights into the nature of activity, society and history. Although the book is a work of theory, it has significant implications for the determination and course not just of activity but of sociohistorical change as well. Drawing on empirical

examples the book argues 1 that timespace is a key component of the overall space and time of social life 2 that interwoven timespaces form an essential infrastructure of important social phenomena such as power coordinated actions social organizations and social systems and 3 that history encompasses constellations of indeterminate temporalspatial events The latter conception of history in turn yields a propitious account of how the past exists in the present In addition because the concept of activity timespace highlights the teleological character of human action the book contains an extensive defense of the teleological character of such allegedly ateleological forms of activity as emotional and ceremonial actions Since finally the book s ideas about timespace and activity as an indeterminate event derive from an interpretation of Heidegger the work furthers understanding of the relevance of his thought for social and historical theory The book combines textual interpretation theoretical argumentation and empirical substantiation Many of its empirical examples are taken from the Blue Grass Horse Country around Lexington Kentucky where the author resides **Electric Railway Journal** ,1910
