Timmerhaus, 1972 *Plant Design and Economics for Chemical Engineers* Max Stone Peters, Klaus D. Timmerhaus, 1980 Process Design, Economics, and Project Engineering Wayne Seames, 2025-11-20

The principal goal of this textbook is to prepare process and chemical engineers for careers in a wide variety of process related jobs. This book will also serve as a reference resource for engineers working in the process and process design industries. It assumes prerequisite knowledge of material and energy balances, heat transfer, fluid flow, and mass transfer but does not require any prerequisite knowledge of economics, process control, process safety, or material selection. Its structure is uniquely organized to follow the project life cycle that is most commonly used by engineering contractors and the operating companies they serve in the process industries.

KEY FEATURES

- Covers both retrofit and new process projects
- Includes a set of easy to use step by step preliminary equipment sizing methods

Powerfuels are the subject of intense and often contentious current discussions within industry, research, politics, as well as the overall society. These discussions primarily revolve around the practical and technical feasibility of power-to-X processes and applications, their economic viability, the respective environmental benefits, the contribution to climate protection, as well as the social acceptability. Thus the primary aim of this book is to provide a comprehensive overview of various aspects, diverse considerations, and different perspectives regarding the future role and utilization of power-to-X pathways on a global scale. This encompasses the challenge of sourcing necessary feedstocks, options for their conversion into different products and product groups, exploring the possibilities of using electricity-based fuels, hydrocarbons in various markets, and establishing suitable framework conditions for viable and sustainable markets in

J. Baker,2013-08-27 Food manufacturing has evolved over the centuries from kitchen industries to modern sophisticated production operations A typical food factory includes the food processing and packaging lines the buildings and exterior landscaping and the utility supply and waste treatment facilities As a single individual is unlikely to possess all the necessary skills required to facilitate the design the task will undoubtedly be undertaken by an interdisciplinary team employing a holistic approach based on a knowledge of the natural and biological sciences most engineering disciplines and relevant legislation In addition every successful project requires a competent project manager to ensure that all tasks are completed on time and within budget This Handbook attempts to compress comprehensive up to date coverage of these areas into a single volume It is hoped that it will prove to be of value across the food manufacturing community The multi disciplinary nature of the subject matter should facilitate more informed communication between individual specialists on the team It should also provide useful background information on food factory design for a wider range of professionals with a more peripheral interest in the subject for example process plant suppliers contractors HSE specialists retailers consultants and financial institutions Finally it is hoped that it will also prove to be a valuable reference for students and instructors in the areas of food technology chemical engineering and mechanical engineering in particular Nuclear Science Abstracts ,1969
