Graham's Electroplating Engineering Handbook L.J. Durney, 1984-11-30

As an instructor in various finishing courses I have frequently made the statement over the years that In the field of metal finishing there is very little black and white just a great deal of grey It is the purpose of the instructor to familiarize the student with the beacons that will guide him through this fog To a very considerable extent a handbook such as this serves a similar purpose It is also

subject to similar limitations Providing all the required information would result in a multi volume encyclopedia rather than a usable handbook In the pages that follow you will therefore find frequent references to other sources where more detailed explanations or information can be found The present goal is proper guidance and the provision of the most frequently required facts not everything that is available In the 13 years since the last edition changes in the finishing industry have been profound but in one sense have resulted in simplifying matters rather than complicating them Because technology has advanced to a level of complexity rendering home brew impractical in many cases dependence on proprietary compounds has become common Therefore detailed solution compositions are often no longer significant or even practical It is thus more important to provide instruction about the factors that affect the choice of the most suitable type of proprietary material
