Ault Jr., 2015-08-06 For several decades educators have struggled to identify the attributes all sciences have in common In the popular mind this effort constitutes the importance of teaching the scientific method In the policy maker's world this pursuit yields standards for all Americans that unify the sciences For teachers the quest for unity has typically meant teaching science as process However a curriculum that prioritizes what all sciences have in common obscures their vital differences For example studying landslides is very different from doing x ray diffraction climate science is unlike medical research Naïve ideas about scientific unity impoverish the public's ability to evaluate scientific enterprises Challenging Science Standards voices skepticism towards the quest for unity Through analyses of disciplinary knowledge school curricula and classroom learning the book uncovers flaws in the unifying dimensions of the science standards It proposes respect for disciplinary diversity and attention to questions of value in choosing what science to teach Illuminated by vignettes of children and adolescents studying topics ranging from snail populations to horse fossils Challenging Science Standards proposes promising remedies **Professional Development for Primary Teachers in Science and Technology** Marc J. de Vries, Hanno van Keulen, Sylvia Peters, Juliette Walma van der Molen, 2012-01-01 This book presents the research output of the Dutch project VTB Pro an internationally oriented project that aimed at providing primary school teachers with the knowledge abilities and attitudes that are necessary to implement science and technology education in their classes An introductory chapter by Wynne Harlen and

Pierre Lena positions this project in the international context From the Foreword by Dr Michel Rocard I have been pleased to discover the VTB Pro three years project carried in the Netherlands Broadening technological education in primary school Focusing on professional development of teachers and presenting first hand testimonies and research the present book demonstrates how to deal with this issue so critical for a renewed pedagogy With proper methods the knowledge of science the interest in science and technology the pedagogical skills can all be improved among teachers who often have no or little affection for science
