Metals and Metalloids in Plant Signaling Tariq Aftab, 2024-06-28 In many parts of the world soil and water are slightly to moderately contaminated with metals and metalloids such as Cd Cu Zn Ni Co Cr Pb Si B and As This could be due to long term use of phosphatic fertilizers sewage sludge application dust from smelters industrial waste and bad watering practices in agricultural lands Beside natural factors human activities have contributed to the enormous increase in heavy metal and or metalloid pollution in the environment Metal and metalloid stress are major abiotic stress factors that limit crop production and reduce agricultural yield The primary response of plants is the generation of reactive oxygen species ROS upon exposure to high levels of metals metalloids They either generate ROS directly through Haber Weiss reactions or overproduction of ROS and occurrence of oxidative stress in plants could be the indirect consequence of metals metalloids toxicity The indirect mechanisms include their interaction with the antioxidant system disrupting the electron transport chain or disturbing the metabolism of essential

elements One of the most deleterious effects induced by heavy metals exposure in plants is lipid peroxidation which can directly cause biomembrane deterioration The impact of metals metalloids on plant water relations has to be distinguished from their effects on water availability in soils on root growth limiting water uptake as well as other phytotoxic effects If soils are high in soluble salts including heavy metal salts the osmotic potential in the soil solution might be lower than the potential of the cell sap in root Under these circumstances the soil solution would severely restrict the rate of water uptake by plants and lead to osmotic stress Further the negative influence metals metalloids have on the growth and activities of soil microorganisms may also indirectly affect the growth of plants In the book *Metals and Metalloids in Plant Signaling* we elucidated the effects of metals metalloids on signaling and communication cascades in plants The general aim of the present book is to provide a comprehensive analysis of the current situation and development in the field and to develop a science based theoretical foundation for the conceptualization and practical application The various chapters are based on the consideration of metals metalloids in terms of their action on different regulatory and functional systems of plants signaling metabolism uptake and transport mechanisms etc

Metalloids in Plants Rupesh Deshmukh,Durgesh Kumar Tripathi,Gea Guerriero,2020-05-18 Understanding metalloids and the potential impact they can have upon crop success or failure Metalloids have a complex relationship with plant life Exhibiting a combination of metal and non metal characteristics this small group of elements which includes boron B silicon Si germanium Ge arsenic As antimony Sb and tellurium Te may hinder or enhance the growth and survival of crops The causes underlying the effects that different metalloids may have upon certain plants range from genetic variance to anatomical factors the complexities of which can pose a challenge to botanists and agriculturalists of all backgrounds With *Metalloids in Plants* a group of leading plant scientists present a complete guide to the beneficial and adverse impacts of metalloids at morphological anatomical biochemical and molecular levels Insightful analysis of data on genetic regulation helps to inform the optimization of farming indicating how one may boost the uptake of beneficial metalloids and reduce the influence of toxic ones Contained within this essential new text there are Expert analyses of the role of metalloids in plants covering their benefits as well as their adverse effects Explanations of the physiological biochemical and genetic factors at play in plant uptake of metalloids Outlines of the breeding and genetic engineering techniques involved in the generation of resistant crops Written for students and professionals in the fields of agriculture botany molecular biology and biotechnology *Metalloids in Plants* is an invaluable overview of the relationship between crops and these unusual elements
