Keane,András Sóbester,James P. Scanlan,2017-08-17 Small Unmanned Fixed wing Aircraft Design is the essential guide to designing building and testing fixed wing UAVs or drones It deals with aircraft from two to 150 kg in weight and is based on the first hand experiences of the world renowned UAV team at the UK s University of Southampton The book covers both the practical aspects of designing manufacturing and flight testing and outlines and the essential calculations needed to underpin successful designs It describes the entire process of UAV design from requirements definition to configuration layout and sizing through preliminary design and analysis using simple panel codes and

spreadsheets to full CFD and FEA models and on to detailed design with parametric CAD tools Its focus is on modest cost approaches that draw heavily on the latest digital design and manufacturing methods including a strong emphasis on utilizing off the shelf components low cost analysis automated geometry modelling and 3D printing It deliberately avoids a deep theoretical coverage of aerodynamics or structural mechanics rather it provides a design team with sufficient insights and guidance to get the essentials undertaken more pragmatically The book contains many all colour illustrations of the dozens of aircraft built by the authors and their students over the last ten years giving much detailed information on what works best It is predominantly aimed at under graduate and MSc level student design and build projects but will be of interest to anyone engaged in the practical problems of getting quite complex unmanned aircraft flying It should also appeal to the more sophisticated aero modeller and those engaged on research based around fixed wing UAVs

[Code Generation with Templates](#) Jeroen Arnoldus,Mark van den Brand,A. Serebrenik,J.J. Brunekreef,2012-05-22 Templates are used to generate all kinds of text including computer code The last decade the use of templates gained a lot of popularity due to the increase of dynamic web applications Templates are a tool for programmers and implementations of template engines are most times based on practical experience rather than based on a theoretical background This book

reveals the mathematical background of templates and shows interesting findings for improving the practical use of templates First a framework to determine the necessary computational power for the template metalanguage is presented The template metalanguage does not need to be Turing complete to be useful A non Turing complete metalanguage enforces separation of concerns between the view and model Second syntactical correctness of all languages of the templates and generated code is ensured This includes the syntactical correctness of the template metalanguage and the output language Third case studies show that the achieved goals are applicable in practice It is even shown that syntactical correctness helps to prevent cross site scripting attacks in web applications The target audience of this book is twofold The first group exists of researcher interested in the mathematical background of templates The second group exists of users of templates This includes designers of template engines on one side and programmers and web designers using templates on the other side
