science and engineering had been applied to the art of motor racing As a result there was no general agreement about the best technical approach to generating speed on a road racing track Each car maker viewed the problem through the lenses of their own history and capabilities The cars on the starting grid demonstrated how varied these histories were When Ford first assaulted Le Mans in 1964 the company followed a similarly casual approach by initially purchasing a race car design from the English firm Lola This car s numerous shortcomings soon led Ford to apply its considerable engineering and developmental resources to the project and the result was the one two three finish in 1966 First place finishes followed in 1967 1968 and 1969 It is the fabulous victories by Ford in the 1960 s that inspired the new 2005 Ford GT Based on a concept car the new production car embodies the characteristic proportions and styling elements of the original GT Under its skin however it has little in common with the original other than its mid engine layout The 2005 Ford GT must function as a street car with a climate control system moderate interior noise levels a reasonable ride and the ability to operate in extremes of hot and cold The seven original SAE papers from the 1960 s contained in this book provide a wonderful insight into the development of the original Ford GT during what many consider to be the technically most interesting period of sports car racing The 11 SAE papers about the new GT included in this volume explain how Ford engineers managed to meet numerous modern day requirements while staying true to the spirit of the original

racing program in the early 1960s was the first stone turned in the task of repurposing its image to the youth market. The introduction of the Mustang increased that exponentially but even in 289 Hi Po form it was no match for the Pontiac GTO or other muscle cars. Neither was the 1966 Fairlane GT or subsequent 390 Mustang the following year. But when the 428 Cobra Jet Mustang debuted at Pomona for the NHRA Winternationals in 1968 that image evolved from wholesome to fearsome. Cobra Jet Mustangs downed all comers and took the vaunted Super Stock Eliminator crown while introducing a new weapon under the hood to serve as fair warning to what was to be uncoiled at the stoplight. By the next model year with the revolutionary shaker hood on Cobra Jet equipped Mach Is and the striking snake adorning the sheet metal of the midsize Cobra Ford's image makeover was complete. The demise of the muscle car era didn't signify the end of the Cobra Jet as Ford continued the performance reign with the 351 Cobra Jet. The legacy left by Mustang, Cougar, Torino, Cyclone and Ranchero 428, 429 and 351 Cobra Jet powered vehicles is indelible. Mustang Monthly editor Rob Kinnan and muscle car expert Diego Rosenberg bring this history back to life in an all encompassing book that is the first to specifically feature all Cobra Jet cars including the purpose built drag cars of today. **Cobra Jet: The History of Ford's Greatest High Performance Cars** will hypnotize you as the first and complete history of Ford's most famous engines during the era's peak. The photos in this edition are black and white. Skylarks, GSXs, Grand Nationals, Rivieras, Gran Sports, the list of formidable performance Buicks is impressive. From the torque monsters of the 1960s to the high flying Turbo models of the 80s, Buicks have a unique place in performance history. During the 1960s when word of the mountains of torque supplied by the big inch Buicks hit the street, nobody wanted to mess with them. Later, big inch Buicks and the Hemi Chryslers went at it hammer and tongs in stock drag shootouts and in the pages of the popular muscle car magazines of the day. The wars between the Turbo Buicks and Mustang GTs in the 1980s were also legendary as both cars responded so well to modifications. **How to Build Max Performance Buick Engines** is the first performance engine book ever published on the Buick family of engines.
