**Mindware: Open-source Software for Robot Intelligence and Autonomy** Daniele Pucci,Vadim Tikhonoff,Ugo Pattacini,Maxime Petit,Lorenzo Jamone,2020-02-25 Intelligence and autonomy are among the most extraordinary capacities blossomed by human evolution Yet endowing humanoid robots with these two crucial capabilities is still one of the biggest problems for the robotics community despite decades of research On the software side algorithms for artificial intelligence are still at an embryonic stage On the hardware side robotic actuators are a far cry from the muscular human system in terms of flexibility and adaptability which in turn reduces autonomy and robustness Underneath the nature of algorithms for intelligence and technology for autonomy the importance of efficient scalable implementations of robust software goes without saying Among the large variety of humanoid robots the iCub has emerged as one of the most diffused research platforms It has been developed as part of the RobotCub EU project and subsequently adopted by more than 35 laboratories worldwide Collaborations across laboratories are encouraged by writing code and libraries openly available As a consequence iCub is considered to be the ideal platform for experimenting and advancing open source software for research in several domains ranging from motor control to cognitive systems **Mechanics of Robotic Manipulation** Matthew T. Mason,2001-06-08 The science and engineering of robotic manipulation Manipulation refers to a variety of physical changes made to the world around us Mechanics of Robotic Manipulation addresses one form of robotic manipulation moving objects and the various processes involved grasping carrying pushing dropping throwing and so on Unlike most books on the subject it focuses on manipulation rather than manipulators This attention to processes rather than devices allows a more fundamental approach leading to results that apply to a broad range of devices not just robotic arms The book draws both on classical mechanics and on classical planning which introduces the element of imperfect information The book does not propose a specific solution to the problem of manipulation but rather outlines a path of inquiry Official Gazette of the United States Patent and Trademark Office ,2002 Proceedings of I4SDG Workshop 2025 - IFToMM for Sustainable Development Goals Giuseppe Carbone,Giuseppe Quaglia,2025-05-21 This book contains the proceedings of the 3rd IFToMM Workshop for Sustainable Development Goals I4SDG held in Lamezia Terme Italy on June 9 11 2025 The workshop papers are focused on those aspects of the theory design and applications of mechanism and machine science that are fundamental for moving toward sustainable development The main topics of the workshop are sustainable energy systems robotics and mechatronics biomechanical and medical systems education linkages gears transmissions and actuators engines and powertrains tribology transportation machinery service systems for sustainability humanitarian engineering and socio

technical systems for sustainable and inclusive development The contributions selected through a rigorous international peer review process highlight many exciting ideas that will drive new research directions and foster multidisciplinary collaboration between researchers from different backgrounds
