A Laboratory Guide to RNA Paul A. Krieg, 1996-08-15 Here is the most complete guide available to the isolation analysis and synthesis of RNA It covers everything researchers and laboratory workers need to know about the study of gene expression via RNA analysis from the theory behind the methods to actual problem solving techniques Step by step protocols are presented for each method A careful presentation of the experimental formalities of these protocols enables specialists and nonspecialists alike to implement the methods easily in the laboratory Each protocol is accompanied by the theoretical background underlying the experimental procedure and most chapters contain illustrations of typical results and troubleshooting tips A Laboratory Guide to RNA offers a straightforward detailed account of experimental procedures ranging from the isolation of RNA from a variety of cell and tissue types detection analysis and quantitation using a range of strategies to large and small scale synthesis of RNA This unique guide not only covers established procedures such as RNA blotting and nuclease protection but also the latest protocols for quantitative PCR and differential display Protocols addressing in situ hybridization are highlighted in an eight page full color section that illustrates the power of the technique for detection of gene expression in tissues and whole organisms Featuring contributions from leading research laboratories and the biotechnology field A Laboratory Guide to RNA Isolation Analysis and Synthesis provides all the methods required for RNA analysis It is the ideal laboratory guide for research scientists graduate students and lab personnel who need a solid reference on the analysis of gene expression at the RNA level

Molecular Diagnostic PCR Handbook Gerrit J. Viljoen, Louis H. Nel, John R. Crowther, 2005-07-19 PREFACE The Joint FAO IAEA Division of Nuclear Techniques in Food and Agriculture is involved in agricultural research and development and assists Member States of FAO and IAEA in improving strategies to ensure food security through the use of nuclear techniques and related biotechnologies where such techniques have a valuable and often unique role In particular molecular diagnostic methods have rapidly evolved in the past twenty years since the advent of the Polymerase Chain Reaction PCR They are used in a wide range of agricultural areas such as improving soil and water management producing better crop varieties diagnosing plant and animal diseases controlling insect pests and improving food quality and safety The uses of nucleic acid directed methods have increased significantly in the past five years and have made important contributions to disease control country programmes for improving national and international trade These developments include the more routine use of PCR as a diagnostic tool in veterinary diagnostic laboratories However there are many problems associated with the transfer and particularly the application of this technology These include lack of consideration of the establishment of quality assured procedures the required set up of the laboratory and the proper training of staff This can lead to a situation where results are not assured This book gives a comprehensive account of the practical aspects of PCR and strong consideration is given to ensure its optimal use in a laboratory environment This includes the setting up of a PCR laboratory Good Laboratory Practice and standardised of PCR

Tipton,2005-12-07 Mitochondria from mammalian tissues possess an elaborate system for Ca^{2+} transporting Ca^{2+} across their inner membrane which consists of Ca^{2+} import Ca^{2+} via the Ca^{2+} uniporter in response to the mitochondrial membrane potential and of Ca^{2+} release by an antiport system in exchange for H^{+} or Na^{+} see Fig 1 Because the uniporter is dependent upon the external Ca^{2+} concentration Ca^{2+} mitochondria accumulate Ca^{2+} until the Ca^{2+} decreases to the level at which the uniporter activity balances the Ca^{2+} efflux The Ca^{2+} at which the uniporter and efflux activities are equal is defined as the setpoint and corresponds to values between 0.3-3 M Figure 1 The Ca^{2+} transport system of the inner membrane of mammalian mitochondria U Ca^{2+} uniporter I Na^{+} independent efflux mechanism or Ca^{2+} 2H $^{+}$ exchanger D Na^{+} dependent efflux mechanism or Ca^{2+} 2Na $^{+}$ exchanger PTP permeability transition pore FP 11 flavoprotein membrane potential pH gradient Adapted from The Scientist ,1997-07 Hemostasis and Thrombosis Protocols David J. Perry,K. John Pasi,2008-02-02 Laboratory studies in hemostasis have traditionally focused on abnormalities of platelet function or the quantitative and qualitative disorders that affect the proteins involved in blood coagulation However over the last 10 years there has been an explosion in our understanding of the molecular bases that underlie many of the inherited and acquired disorders of hemostasis Many of these disorders are now routinely diagnosed and assessed by methods that involve genotypic analysis Indeed in the late 1990s the distinction between molecular methods for research and for routine diagnosis is becoming increasingly blurred The techniques and approaches that are used in hemostasis are manifold and published in isolation in a variety of publications The aim therefore of this volume Hemostasis and Thrombosis Protocols is to pull together into a single volume the variety of techniques that are frequently used in the field of hemostasis We have targeted this volume at laboratories who wish to move into the field of molecular hemostasis or who may already have some experience in this area but wish to develop new areas of research and diagnosis The chapters are wide ranging and hopefully provide a broad overview of the differing applications in which these standard techniques can be used Though the articles may appear relatively specific the techniques contained within them are applicable to the study of many different disorders and we hope that they provide a series of ideas and concepts well suited to problem solving **The Nidoviruses** Ehud Lavi,Susan R. Weiss,Susan T. Hingley,2012-12-06 In 1996 the International Committee for Taxonomy of Viruses ICTV recognized the name Nidovirales as the formal name for Coronaviridae and Arteriviridae In recognition of this change and in response to the wishes of our colleagues we named this meeting for the first time The International Symposium of Nidoviruses The meeting in the wooded environment of Lake Harmony Pennsylvania provided a stimulating opportunity for assessing the progress made in the field since the last meeting in Segovia Spain in 1997 Over 150 scientists from academia and industry attended the meeting The

meeting hosted senior members of the Nidovirus community some of whom have been studying the subject for over 20 years as well as younger scientists the next generation of Nidovirologists The traditional informal format the shared meals the social activities and the relatively inexpensive venue made the meeting a popular adventure In her opening remarks Susan Weiss showed pictures from previous meetings reminding us how young we used to look Neal Nathanson was our keynote speaker at the opening night giving an overview on how viral pathogenesis studies helped in shaping the evolution of viral research and vaccine development The scientific program of the meeting was divided into 9 sessions including 10 keynote presentations The meeting opened with a session on epidemiology evolution and genome structure Sasha Gorbolenya shared with us insights gained from comparative sequence analysis emphasizing the unifying traits among nidoviruses but also pointed out the remaining black holes
