Tissue Engineering Revenues Rise

Scott Glazer

More than half (52%) of the companies comprising the tissue engineering (TE) and stem cell industries are revenue-generating, compared to about 21% four years ago, according to an analysis published in *Tissue Engineering Part B*.

Of those companies, 31% having commercial products and 21% are service firms; another 30% have products in clinical trials.

"Today, the industry has begun to understand how to incorporate and market TE and stem cell products, convincing itself and still growing," concludes a team of authors led by Robert Langer, Sc.D., David H. Koch Institute Professor at the Massachusetts Institute of Technology.

The data collected by Dr. Langer and colleagues between 2007 and mid-2011 "suggest the TE and stem cell industry has matured and is on a path pointing toward commercial success," state the authors in the article entitled *Progress in the Tissue Engineering and Stem Cell Industries: Are We There Yet?*

They report that the industry is just attaining profitability, with sales revenues reaching \$3.1 billion and industry spending up, reaching \$3.6 billion, and "appears to be on a positive trajectory," although they anticipate "that there may be growth pains in the industry markets."

NGS & RNA-Seq Form Dynamic Duo

Kerby Lidenfeld

Next-generation sequencing (NGS) allows the interrogation of genomes and transcriptomes at unparalleled resolution. NGS is becoming a powerful tool to identify cancer mutations that will eventually be translated to the clinic.

Further, second-generation (RNA-seq) technology permits the simultaneous evaluation of gene expression and transcript structure at a high level of accuracy and at a single nucleotide level. RNA-seq has been called a revolutionary tool for transcriptomics. It works by utilizing NGS high-throughput technology to characterize cDNAs representative of the cell's transcriptome.

RNA-Seq can be a valuable analytical tool for a variety of applications.

Recent Articles On Genetic Engineering:

Genetic Engineering & Biotechnology News, 2009 **Genetic Engineering News**, 2005 *God and Human Genetic Engineering* David Basinger, 2023-12-21 Science and Religion have often intersected on issues. However, no set of current scientific advances is more promising and problematic for religious or non-religious individuals than those that fall under the heading of Human Genetic Engineering, as these advances have the potential not only to cure human disease, remove undesirable human traits, and enhance desirable human traits, but to pass on these modifications to future generations. This Element is an introductory overview of these advances, the ethical issues they raise, and the lines of reasoning, including religious lines of reasoning, used to support or challenge these advances. The author's goal is to suggest a way of assessing these advances that will give us whether religious or not a solid basis for deciding these issues for ourselves and engaging in respectful, constructive dialog with others.

Recombinant DNA Technical Bulletin, 1986 Biotechnology, Genetic Engineering for Crop Plant Improvement Robert D. Warmbrodt, 1992 *Global Regulatory Outlook for CRISPRized Plants* Kamel A. Abd-El Salam, Aftab Ahmad, 2023-11-17 Global Regulatory Outlook of CRISPRized Plants summarizes CRISPR-Cas systems and applications for precise editing of plant genomes and discusses the global regulatory framework for CRISPR-edited crops. While CRISPR technology has become a routine, cheap, and an efficient method to generate edited crops with superior traits, how these crops will be regulated will determine the future of this technology. Understanding the current state of regulation, the concerns, issues, and foundations for decisions will be key in determining how this technology is used going forward. Global Regulatory Outlook of CRISPRized Plants highlights regulatory classification of CRISPR modifications such as SDN1, SDN2, and SDN3 and their global regulation and discusses the social, ethical, governance, and policy issues related to CRISPR-edited crops. This important summary will be vital to the successful commercialization of CRISPR technology and biosafety concerns associated with this technology. Presents regulatory frameworks for CRISPR-edited crops in the USA, Canada, Australia, and New Zealand, Japan, EU, Africa, and Asia. Includes a specific chapter on global regulation of genetically engineered crops. Addresses public perception, social aspects, and ethical concerns that are impacting the commercialization of CRISPR-edited crops.

Making a World of Difference National Academy of Engineering, 2014-01-01 Fifty years ago the National Academy of Engineering (NAE) was founded by the stroke of a pen when the National Academy of Sciences Council approved the NAE's articles of organization. *Making a World of Difference* commemorates the NAE anniversary with a collection of essays that highlight the prodigious changes in people's lives that have been created by engineering over the past half century and consider how the future will be similarly shaped. Over the past 50 years, engineering has transformed our lives literally every day, and it will continue to do so, going forward, utilizing new capabilities, creating new applications, and providing ever-expanding services to people. The essays of *Making a World of Difference* discuss the seamless integration of engineering into both our society and our daily lives and present a vision of what engineering may deliver in the next half

Ethics for a Brave New World, Second Edition (Updated and Expanded) John S. Feinberg, Paul D. Feinberg, 2010-11-04 Aldous Huxley's 1932 book *Brave New World* foresees a world in which technological advances have obliterated morality and freedom. John Feinberg and Paul Feinberg, in the first edition of *Ethics for a Brave New World*, noted how Huxley landed frighteningly close to the truth. Their book responded to ethical crises such as abortion, euthanasia, capital punishment, and genetic engineering by looking to Scripture for principles to guide us through the moral quagmires of our time. Now dramatically updated and expanded, this edition of *Ethics for a Brave New World* seeks to maintain the relevance, rigorous scholarship, and biblical faithfulness of the first edition. While many of the topics covered in the book remain the same, John Feinberg has revised each chapter to keep it current with contemporary trends and to respond to the most recent scholarship. There is a new chapter on stem cell research and greatly expanded material on issues such as homosexuality and genetic engineering. This important resource will be a valuable guide for students and those seeking answers to ethical dilemmas.

Oncolytic Viruses - Genetically Engineering the Future of Cancer Therapy Benjamin Gesundheit, Joshua P. Rosenzweig, 2016-11-22 The ability to genetically engineer oncolytic viruses in order to minimize side effects and improve

the selective targeting of tumor cells has opened up novel opportunities for treating cancer Understanding the mechanisms involved and the complex interaction between the viruses and the immune system will undoubtedly help guide the development of new strategies Theranostic biomarkers to monitor these therapies in clinical trials serve an important need in this innovative field and demand further research Pandemics and Resilience: Lessons we should have learned from Zika

David M. Berube, 2023-05-05 The aim of the book was to produce the most comprehensive examination of a pandemic that has ever been attempted By cataloging the full extent of the Zika pandemic this book will be the most complete history and epistemic contextualization ever attempted to date The work should function as the primary source for students researchers and scholars who need information about the Zika pandemic This book examines the technical literature digital and popular literature and online materials to fully contextualize this event and provide a bona fide record of this event and its implications for the future It is somewhat serendipitous that while this work was underway we are going through another pandemic One of the primary lessons we did not learn by Zika was pandemic events will return repeatedly and we need to learn from each one of them to prepare the planet for the next one Just because Zika seemed to have died out does not make it less important We were lucky that the virus evolved into what seemed to be a less virulent version of itself and the vector mosquitoes were concentrated elsewhere Finally this book represents a tour de force in scholarship involving nearly 4 000 sources of information and does not shy from a detailed examination of the controversies conspiracies and long term consequences when we avoid learning from outbreaks such as Zika Burning Rage of a Dying Planet Craig

The Dancer and the Devil John E. O'Neill, Sarah C. Wynne, 2022-04-26 Communism must kill what it cannot control So for a century it has killed artists writers musicians and even dancers It kills them secretly using bioweapons and poison to escape accountability Among its victims was Anna Pavlova history's greatest dancer who was said to have God given wings and feet that never touched the ground But she defied Stalin and for that she had to die Her sudden death in Paris in 1931 was a mystery until now The Dancer and the Devil traces Marxism's century long fascination with bioweapons from the Soviets leak of pneumonic plague in 1939 that nearly killed Stalin to leaks of anthrax at Kiev in 1972 and Yekaterinburg in 1979 from the leak of a flu in northeast China in 1977 that killed millions to the catastrophic COVID 19 leak from biolabs in Wuhan China Marxism's dark past must not be a parent to the world's dark future COMMUNIST CHINA PLAYED WITH FIRE AND THE WORLD IS BURNING Nearly ten million people have died so far from the mysterious Covid 19 virus These dead follow a long line of thousands of other brave souls stretching back nearly a century who also suffered mysterious natural deaths including dancers writers saints and heroes These honored dead should not be forgotten by amnesiac government trying to avoid inconvenient truth The dead and those who remember and loved them deserve answers to two great questions How Why The Dancer and the Devil answers these questions It tracks a century of Soviet and then Chinese Communist poisons and bioweapons through their development and intentional use on talented artists and heroes like Anna Pavlova Maxim Gorky Raoul Wallenberg and Alexis Navalny It then tracks leaks of bioweapons beginning in Saratov Russia in 1939 and Soviet Yekaterinburg in 1979 through Chinese leaks concluding in the recent concealed leak of the manufactured bioweapon Covid 19 from the military lab in Wuhan China Stalin Putin and Xi perpetrators of these vast crimes against humanity itself should not be allowed to escape responsibility This book assembles the facts on these cowardly murderers calling them to account for their heartless crimes against man concluding in Covid 19

Editing Humanity Kevin Davies, 2020-10-06 One of the world's leading experts on genetics unravels one of the most important breakthroughs in modern science and medicine If our genes are to a great extent our destiny then what would happen if mankind could engineer and alter the very essence of our DNA coding Millions might be spared the devastating effects of hereditary disease or the challenges of disability whether it was the pain of sickle cell anemia to the ravages of Huntington's disease But this power to play God also raises major ethical questions and poses threats for potential misuse For decades these questions have lived exclusively in the realm of science fiction but as Kevin Davies powerfully reveals in his new book this is all about to change Engrossing and page turning Editing Humanity takes

readers inside the fascinating world of a new gene editing technology called CRISPR a high powered genetic toolkit that enables scientists to not only engineer but to edit the DNA of any organism down to the individual building blocks of the genetic code Davies introduces readers to arguably the most profound scientific breakthrough of our time He tracks the scientists on the front lines of its research to the patients whose powerful stories bring the narrative movingly to human scale Though the birth of the CRISPR babies in China made international news there is much more to the story of CRISPR than headlines seemingly ripped from science fiction In *Editing Humanity* Davies sheds light on the implications that this new technology can have on our everyday lives and in the lives of generations to come

Experiencing the New Genetics Kaja Finkler, 2010-08-03 Over the past several decades there has been an explosion of interest in genetics and genetic inheritance within both the research community and the mass media The science of genetics now forecasts great advances in alleviating disease and prolonging human life placing the family and kin group under the spotlight In *Experiencing the New Genetics* Kaja Finkler argues that the often uncritical presentation of research on genetic inheritance as well as the attitudes of some in the biomedical establishment contribute to a genetic essentialism a new genetic determinism and the medicalization of kinship in American society She explores some of the social and cultural consequences of this phenomenon Finkler discovers that the new genetics can turn a healthy person into a perpetual patient complicate the redefinition of the family that has been occurring in American society for the past few decades and lead to the abdication of responsibility for addressing the problem of unhealthy environmental conditions *Experiencing the New Genetics* will assist scholars and general readers alike in making sense of this timely and multifaceted issue

Genetically Engineered Food Knut J. Heller, 2006-12-13 Continuing the very successful first edition this book reviews the most recent changes to the legal situation in Europe concerning genetically engineered food and labeling Due to the extremely rapid developments in green biotechnology all the chapters have been substantially revised and updated Divided into three distinct parts the text begins by covering applications and perspectives including transgenic modification of production traits in farm animals fermented food production and the production of food additives using filamentous fungi The second section is devoted to legislation while the final part examines methods of detection such as DNA based methods and methods for detecting genetic engineering in composed and processed foods From the reviews of the first edition This work promises to be a standard reference in the detection of genetically engineered food I believe this work will find a valued place for any scientist regulator or technical library that deals with biotechnology or detection of genetically engineered food organisms James J Heinis *Journal of Agricultural Food Information*
