1. Solve the simultaneous equations by the method of elimination, giving a full algebraic solution.

$$\begin{cases} 2x + 3y = 12 \\ 3x + 2y = 10 \end{cases}$$

2. The diagram shows the cross-section of a bridge. The bridge is supported by two pillars. The distance between the pillars is 100 m. The height of the bridge is 20 m. The distance from the left pillar to the point where the bridge crosses the horizontal line is 30 m. The distance from the right pillar to the point where the bridge crosses the horizontal line is 40 m. The distance from the left pillar to the point where the bridge crosses the horizontal line is 30 m. The distance from the right pillar to the point where the bridge crosses the horizontal line is 40 m.

3. The diagram shows a circle with centre O. A chord AB is drawn. A tangent line is drawn from a point P outside the circle to the circle at point A. A secant line is drawn from P through the circle, intersecting the circle at points B and C. The length of the tangent segment PA is 12 cm. The length of the secant segment PB is 8 cm. The length of the secant segment PC is 20 cm. The length of the tangent segment PA is 12 cm. The length of the secant segment PB is 8 cm. The length of the secant segment PC is 20 cm.

4. The table shows the number of books sold in a library.

Category	Books sold
Novels	120
Non-fiction	80

Find the ratio of the number of novels sold to the number of non-fiction books sold.

$$\frac{\text{Novels}}{\text{Non-fiction}} = \frac{120}{80} = \frac{3}{2}$$

5. The diagram shows a circle with centre O. A chord AB is drawn. A tangent line is drawn from a point P outside the circle to the circle at point A. A secant line is drawn from P through the circle, intersecting the circle at points B and C. The length of the tangent segment PA is 12 cm. The length of the secant segment PB is 8 cm. The length of the secant segment PC is 20 cm. The length of the tangent segment PA is 12 cm. The length of the secant segment PB is 8 cm. The length of the secant segment PC is 20 cm.

$$\frac{PA^2}{PB \cdot PC} = \frac{12^2}{8 \cdot 20} = \frac{144}{160} = \frac{9}{10}$$

The Mathematics of the Uncertain Eduardo Gil, Eva Gil, Juan Gil, María Ángeles Gil, 2018-02-28 This book is a tribute to Professor Pedro Gil who created the Department of Statistics OR and TM at the University of Oviedo and a former President of the Spanish Society of Statistics and OR SEIO In more than eighty original contributions it illustrates the extent to which Mathematics can help manage uncertainty a factor that is inherent to real life Today it goes without saying that in order to model experiments and systems and to analyze related outcomes and data it is necessary to consider formal ideas and develop scientific approaches and techniques for dealing with uncertainty Mathematics is crucial in this endeavor as this book demonstrates As Professor Pedro Gil highlighted twenty years ago there are several well known mathematical branches for this purpose including Mathematics of chance Probability and Statistics Mathematics of communication Information Theory and Mathematics of imprecision Fuzzy Sets Theory and others These branches often intertwine since different sources of uncertainty can coexist and they are not exhaustive While most of the papers presented here address the three aforementioned fields some hail from other Mathematical disciplines such as Operations Research others in turn put the spotlight on real world studies and applications The intended audience of this book is mainly statisticians mathematicians and computer scientists but practitioners in these areas will certainly also find the book a very interesting read
