

Chords – Tangents – Secants Formulas Reference Sheet

Angle Formulas

"The Hourglass"

(Two intersecting chords)

Think of an hourglass: the sand starts on the top, goes down through the middle, and ends at the bottom.

- a = the measure of the top seg.
- b = the measure of the bottom seg.
- c = the measure of the other top seg.

$$\text{Angle formula: } \frac{a + b}{2} = m$$

Note: m is the supplement of m . $m + M = 180^\circ$

"The A-Frame"

(Two intersecting secants)

- a = the measure of the outer seg.
- b = the measure of the inner seg.
- c = the measure of the other seg.

It may help to think of it this way:

$$\text{corner} = \frac{\text{far} - \text{near}}{2}$$

$$\text{Angle formula: } \frac{b - a}{2} = c$$

"The Lucky Seven"

(A tangent and a secant)

Notice that the tangent segment intersects the circle (the top of the "7"), and it also intersects a secant, which passes through the circle.

Same formula as for the A-Frame:

- a = the measure of the outer seg.
- b = the measure of the inner seg.
- c = the measure of the other seg.

$$\text{Angle formula: } \frac{b - a}{2} = c$$

Length Formulas

To determine the lengths, just think of this as a big ol' cross-multiplication:

$$\text{Length formula: } ab = cd$$

To determine the lengths, it helps to think of it this way:

$$\text{outside} \left(\begin{matrix} \text{outside} \\ \text{thing} \end{matrix} \right) = \text{outside} \left(\begin{matrix} \text{outside} \\ \text{thing} \end{matrix} \right)$$

- a = length of the outer segment.
- b = length of the inner segment.
- c = length of the other outer segment.
- d = length of the other inner segment.

$$\text{Length formula: } a(x + y) = c(x + d)$$

- a = length of the tangent segment.
- b = length of the inner segment.
- c = length of the outer segment.

To determine the lengths, it helps to think of it exactly the same way:

$$\text{outside} \left(\begin{matrix} \text{outside} \\ \text{thing} \end{matrix} \right) = \text{outside} \left(\begin{matrix} \text{outside} \\ \text{thing} \end{matrix} \right)$$

$$a^2 = c(m + d)$$

$$\text{Length formula: } a^2 = c(m + d)$$

$$a^2 = m(m + d)$$

Squaring the Circle Douglas M. Jesseph, 1999 In 1655 the philosopher Thomas Hobbes claimed he had solved the centuries old problem of squaring of the circle constructing a square equal in area to a given circle With a scathing rebuttal to Hobbes's claims the mathematician John Wallis began one of the longest and most intense intellectual disputes of all time Squaring the Circle is a detailed account of this controversy from the core mathematics to the broader philosophical political and religious issues at stake Hobbes believed that by recasting geometry in a materialist mold he could solve any geometric problem and thereby demonstrate the power of his materialist metaphysics Wallis a prominent Presbyterian divine as well as an eminent mathematician refuted Hobbes's geometry as a means of discrediting his philosophy which Wallis saw as a dangerous mix of atheism and pernicious political theory Hobbes and Wallis's battle of the books illuminates the intimate relationship between science and crucial seventeenth century debates over the limits of sovereign power and the existence of God
