

## Angles in Polygon

Sheet 1

Example:

Sum of the interior angles = (Number of sides - 2)  $\times$   $180^\circ$ 

$$= (6 - 2) \times 180^\circ$$

$$= 4 \times 180 = 720^\circ$$

Sum of the interior angles =  $120^\circ + 140^\circ + 130^\circ + x + 58^\circ + x - 4^\circ + x$ 

$$720^\circ = 444^\circ + 3x$$

$$3x = 720^\circ - 444^\circ = 276^\circ$$

$$x = \frac{276^\circ}{3} = 92^\circ$$

$$\angle A = x + 58^\circ = 92^\circ + 58^\circ = 150^\circ$$

$$\angle B = x - 4^\circ = 92^\circ - 4^\circ = 88^\circ$$

$$\angle F = x = 92^\circ$$

Facilitator's Guidebook for Use of Mathematics Situations in Professional Learning Rose Mary Zbiek, Glendon W. Blume, M. Kathleen Heid, 2018-01-01. The depth and breadth of a mathematics teacher's understanding of mathematics matter most as the teacher engages in the daily work of teaching. One of the major challenges to teachers is to be ready to draw on the relevant mathematical ideas from different areas of the school curriculum and from their postsecondary mathematics experiences that can be helpful in explaining ideas to students, making instructional decisions, creating examples, and engaging in other aspects of their daily work. Being mathematically ready and confident requires teachers to engage in ongoing professional learning that helps them to connect mathematics to events like those they live on a daily basis. The purpose of this volume is to provide teachers, teacher educators, and other facilitators of professional learning opportunities with examples of authentic events and tools for discussing those events in professional learning settings. The work shared in Facilitator's Guidebook for

Use of Mathematics Situations in Professional Learning Guidebook resulted from a collaborative effort of school mathematics supervisors and university mathematics educators. The collaborators joined their varied experiences as teachers, coaches, supervisors, teacher educators, and researchers to suggest ways to scaffold activities, encourage discussion, and instigate reflection with teacher participants of differing mathematics backgrounds and with varying teaching assignments. Each guide has ideas for engaging and furthering mathematical thought across a range of facilitator and participant mathematics backgrounds and draws on the collaborators' uses of the Situations with in-service and prospective teachers. The events and mathematical ideas connected to each event come from Situations in Mathematical Understanding for Secondary Teaching: A Framework and Classroom Based Situations. A Situation is a description of a classroom-related event and the mathematics related to it. For each of six Situations, school and university collaborators developed a facilitator's guide that presents ideas and options for engaging teachers with the event and the mathematical ideas. The Guidebook also contains suggestions for how teachers and others might develop new Situations based on events from their own classrooms as a form of professional learning. Both teacher educators and school-based facilitators can use this volume to structure sessions and inspire ideas for professional learning activities that are rooted in the daily work of mathematics teachers and students.

It is also suitable for aspirants preparing for Olympiads and other such mathematics enrichment activities. Answer sheets with explanations are there in a separate sheet. It will enable parents and teachers for organizing the task in a better way. I am confident enough about the competence of fellow students having willingness to move up to the final stage of the Mathematics Enrichment Activities of various stages. There are different worksheets in accord to the time of studies that can be assigned to the fellow student. Answers are in a separate sheet paper that can be kept at different place. Parents and teachers use this book of activities to develop interest of students on mathematical as well as analytical skills. For Students We expect a kind of understanding from students of Grade 6 of the National Curriculum Content areas duly recommended for different bodies of National and State Education Departments is converged for obtaining core of the curriculum. It is expected that the fellow student should understand the number system basics of geometry and other related operations. There are some relationships that exist in between number systems of various types. We often come across four different number system in computer Science. For the class works and mathematical operations of Grade 6 we restrict our discussion to decimal system only. I hope the kind of effort and combination of problems might enhance the knowledge base of our fellow students. This level of learning is considered as a vital moment of transition as the fellow learner is being introduced to a number system namely whole number and integer. An introductory touch regarding rational number is also an important feature of this level of learning.
