Abstract: This study examined the effects of a 12-week, 3-day-per-week, 120-min exercise program on the health-related quality of life (HRQL) of sedentary, middle-aged, obese women. The program consisted of aerobic and resistance training. The results showed that the program significantly improved the HRQL of the participants, as measured by the SF-36v2. The program also significantly improved the physical and mental health of the participants, as measured by the SF-36v2. The program was well-tolerated and had no adverse effects on the participants. The results of this study suggest that a 12-week, 3-day-per-week, 120-min exercise program can improve the HRQL of sedentary, middle-aged, obese women.
