Inman, Cheryl Reed, Peter Sands, 2003-10-03 This volume provides an informed view of how information

technology is shaping the contemporary humanities. It specifically reflects five ideals: humanities scholars with all levels of access are doing important work with technology; humanities scholars' projects with technology reflect significant diversity both across and within disciplinary bounds; using information technology in the humanities is a continuous conversation; information technology offers new options for humanities education; and just as collaboration changes the nature of any project, so does information technology change the nature of collaboration, its speed, character, methods, and possible implementations. The first to explore new and important ways for humanities scholars to collaborate across disciplines via electronic media, this book redefines electronic collaboration, presents insightful models of student collaboration, provides important models of faculty collaboration with special emphasis on professional development, and offers a look at the future of electronic collaboration and the overall future of the humanities. Featuring the voices of humanities teacher-scholars at all stages of their professional careers, the chapters emphasize pedagogy, outlining contemporary issues and options. *Electronic Collaboration in the Humanities* speaks directly to anyone involved with interdisciplinary initiatives in colleges and universities, such as writing across the curriculum and communication across the curriculum programs, and to specific populations within the humanities, including literacy and technology, language and literature, literacy studies, professional writing, and English education.

Inspiring the Best in Students Jonathan C. Erwin, 2010-10-04 How can teachers connect with and motivate students to embrace learning? According to Jonathan C. Erwin, the secret lies in forging positive relationships with students by meeting their individual social-emotional needs. *Inspiring the Best in Students* includes step-by-step instructions for dozens of classroom activities for grades 3-12 that help build student-teacher relationships while teaching both content and skills. Also included is a thorough overview of William Glasser's Choice Theory and such core teaching and learning concepts as internal control, psychology, and total behavior. The more students are given the freedom to make choices in a safe environment while also having fun, the more their enthusiasm for learning deepens. By following the advice in this book, you can ensure that the students in your class will remain engaged and inspired to achieve their best.
