Transmission genetics including traditional topics like multigenic inheritance linkage and pedigree analysis is explored with an understanding that the relationships between genotype and phenotype depends on the molecular processes affecting gene expression This work concludes with topics that synthesize information from both transmission and molecular genetics including epigenetics cancer biology and evolution Science is meant to be an impartial field of study but it is nonetheless influenced by social factors that drive which research questions are pursued and that color how results are interpreted or acted upon In this text the fundamental concepts of genetics are described in the context of the historical and social pressures that affect the work Examples of how these concepts are applied in human medicine agriculture and ecology are also explored along with conversations of the relationship between genetics and society
