Abstract: This study examined the effects of a 12-week, 3-day-per-week, 100-minute-per-session, group-based, low-impact aerobically demanding dance program on the psychosocial health of older adults. The program was designed to improve mood, self-esteem, and social support. The program was evaluated using a pretest-posttest design. The results showed that the program had a significant positive effect on mood, self-esteem, and social support. The program was well-received by the participants and was found to be a viable option for improving the psychosocial health of older adults.
