Ecosystem-Based Management for the Oceans Karen McLeod,Heather Leslie,2012-09-26 Conventional management

approaches cannot meet the challenges faced by ocean and coastal ecosystems today. Consequently, national and international bodies have called for a shift toward more comprehensive ecosystem based marine management. Synthesizing a vast amount of current knowledge, *Ecosystem Based Management for the Oceans* is a comprehensive guide to utilizing this promising new approach. At its core, ecosystem based management (EBM) is about acknowledging connections. Instead of focusing on the impacts of single activities on the delivery of individual ecosystem services, EBM focuses on the array of services that we receive from marine systems, the interactive and cumulative effects of multiple human activities on these coupled ecological and social systems, and the importance of working towards common goals across sectors. *Ecosystem Based Management for the Oceans* provides a conceptual framework for students and professionals who want to understand and utilize this powerful approach. And it employs case studies that draw on the experiences of EBM practitioners to demonstrate how EBM principles can be applied to real world problems. The book emphasizes the importance of understanding the factors that contribute to social and ecological resilience, the extent to which a system can maintain its structure, function, and identity in the face of disturbance. Utilizing the resilience framework, professionals can better predict how systems will respond to a variety of disturbances as well as to a range of management alternatives. *Ecosystem Based Management for the Oceans* presents the latest science of resilience while it provides tools for the design and implementation of responsive EBM solutions.

Ecosystems and Human Well-Being Neville Ash, 2010-04-05. The Millennium Ecosystem Assessment (MA) is the most extensive study ever of the linkages between the world's ecosystems and human well-being. It is one of the most important conservation initiatives ever undertaken, and the ecosystem services paradigm on which it is based provides the standard for practice. This manual supplies the specific tools that practitioners of the paradigm need in order to extend their work into the future. The manual is a stand-alone how-to guide to conducting assessments of the impacts on humans of ecosystem changes. It builds on the experiences and lessons learned from the MA global and sub-global assessment initiatives, with chapters written by well-known participants in those initiatives. It also includes insights gained from service-focused assessment activities since the completion of the MA in 2005.

Designing Integrated Care Ecosystems Bernard J. Mohr, Ezra Dessers, 2019-12-26. This book brings together research and theory about integrated care ecosystems with modern Socio-Technical Systems Design. It provides a practical framework for collaborative action and the potential for better care in every sense. By combining the aspirations, information, resources, activities, and the skills of public and private organizations, independent care providers, informal care givers, patients, and other ecosystem actors, this framework makes possible results that none of the parties concerned can achieve independently. It is both a design challenge and a call for innovation in how we think about health care co-creation. Illustrative stories from many countries highlight different aspects of integrated care ecosystems, their design, and their functioning in ways that allow us to push the operating frontiers of what we today call our health care system. It explains what it means to design higher levels of coordination and collaboration into fragmented care.
