

is experienced in these type of surveys if you're feeling worried about these problems. Examples of what to expect would be:

- How to calculate maximum allowable error for traverses
- The maximum allowable precisions for ALTA surveys and how to calculate them
- Vertical Accuracy related to contours
- Basic business/surveying ethics problems
- Construction/Planning problems

My biggest tip for the exam but especially for this section would be to utilize the digital PS Reference Handbook they supply during the exam!! If you come across a term you don't know or something your not sure about, type the term into the search bar! Aside from approximately 5 standard questions I found word for word in the handbook, I also found the answer to 2 more random questions by searching the term in the handbook. Like the first section, there was about 7-8 select all that apply questions which made things tough. Aside from that, most of the ethics and business questions were pretty straight forward and you either know them or don't. Even after taking the exam I wouldn't know where to study for these types of questions so I wouldn't worry about them too much.

All in all, I thought the PS exam was more difficult than the FS exam due to the fact there wasn't a clear "right" answer. There were so many select all that apply, what would you do in this scenario and ranking questions which made it a lot more challenging. I probably used my calculator a total of 5 times and they were pretty simple calculations. Unlike the FS Exam, you don't need a programmed calculator or anything fancy to solve the PS problems that involved math. I didn't take a break between the two sessions and finished the exam in just under 3 hours. If you've passed your FS Exam, read through/practiced the study material I listed above and have some good working experience, you're more than prepared to take the exam. If you've read this and have any further questions, feel free to reach out and ask me.
