10 to 25 David Yeager, 2014-08-06

NATIONAL BESTSELLER Acclaimed developmental psychologist David Yeager reveals the new science of motivating young people ages ten through twenty-five in this groundbreaking book that is a must-read for managers, parents, educators, coaches, and mentors everywhere. Required reading for anyone who aspires to be a wise influence on the young people they care about.

Angela Duckworth: One of the most fascinating and important books of the past decade. It will change millions of lives.

Carol Dweck: This engaging, data-driven book is filled with practical insights.

Adam Grant: Imagine a world in which Gen Xers, millennials, and boomers interact with young people in ways that leave them feeling inspired, enthusiastic, and ready to contribute rather than disengaged, outraged, or overwhelmed. That world may be closer than you think.

In this book, based on cutting-edge research, psychologist David Yeager explains how to stop fearing young people's brains and hormones and start harnessing them. Neuroscientists have discovered that around age ten, puberty spurs the brain to crave socially rewarding experiences such as pride, admiration, and respect, and to become highly averse to social pain such as humiliation or shame. As a result, young people are subtly reading between the lines of everything we say, trying to interpret the hidden implications of our words to find out if we are disrespecting or honoring them. Surprisingly, this sensitivity to status and respect continues into the mid-twenties.

10 to 25 helps adults develop an ear for the difference between the right and wrong way to respect young people and avoid frustrating patterns of miscommunication and conflict. Yeager explains how to adopt what he terms the mentor mindset, which is a leadership style that's attuned to young people's need for status and respect. Anyone can adopt the mentor mindset by following a few highly effective and easy-to-learn practices such as validating young people's perspectives rather than dismissing them, asking them questions rather than telling them what to do, being transparent about your beliefs and goals rather than assuming that they will accurately guess your thoughts, and holding them to high standards rather than coddling them. Yeager's scientific experiments have shown these practices reduce a wide variety of behavior problems, including school dropout, unhealthy eating, stress, purposelessness, mental health problems, and more.

One of the biggest misconceptions about mentoring is that it takes up too much time. On the contrary, those who use the mentor mindset end up with more time. Through back-and-forth conversations, young people

feel empowered and managers can transfer responsibility to them Young people in this age group are poised to learn grow and accomplish incredible things if only we can tap into the basic neurobiological systems that drive their motivation and behavior An essential read for anyone who interacts with young people 10 to 25 is a groundbreaking book that offers long term strategies to help nurture well adjusted independent accomplished young people who contribute to society in positive ways all while making our own lives easier

Alternative Models of Addiction Hanna Pickard, Serge H. Ahmed, Bennett

Foddy, 2015-12-07 For much of the 20th century theories of addictive behaviour and motivation were polarized between two models The first model viewed addiction as a moral failure for which addicts are rightly held responsible and judged accordingly The second model in contrast viewed addiction as a specific brain disease caused by neurobiological adaptations occurring in response to chronic drug or alcohol use and over which addicts have no choice or control As our capacity to observe neurobiological phenomena improved the second model became scientific orthodoxy increasingly dominating addiction research and informing public understandings of addiction More recently however a dissenting view has emerged within addiction research based partly on new scientific research and partly on progress in philosophical and psychological understandings of relevant mental phenomena This view does not revert to treating addiction as a moral failure but nonetheless holds that addictive behaviour is fundamentally motivated by choice and subject to at least a degree of voluntary control On this alternative model of addiction addictive behaviour is an instrumental means to ends that are desired by the individual although much controversy exists with respect to the rationality or irrationality of these ends the degree and nature of the voluntary control of addictive behaviour and motivation the explanation of the difference between addictive and non addictive behaviour and motivation and lastly the extent to which addictive behaviour and motivation is correctly characterised as pathological or diseased This research topic includes papers in the traditions of neuroscience psychology philosophy law and social science that explore alternative understandings of addiction
