2.1 Read the passage below and answer the questions that follow.

Peat lands are special wetlands that play a very important role in ecology. A peat land, of approximately 6 000 years old, near Mufang is almost destroyed because of excessive extraction of water from the nearby Molofo river. The water is extracted for human consumption.

Peat lands like the one near Malmgren is exceptional and play an important role in storing water as well as preventing climate changes.

Dr Phil-Louis Brondizio said that carbon that is 'held' or 'stored' by peat lands combats climate change because it decreases the amount of carbon in the atmosphere.

Peat lands trap about one third of the world's carbon. Approximately 60% of wetlands worldwide are peat lands. However in South Africa about 10% of the wetlands are peat lands.

Gundling explained that peat lands can hold about 1 000 times its own mass in water. This replenishes the water table and is the source that keeps streams flowing. The "sponge effect" of the peat also makes it possible to store water that is then released during the seasons.

Dr Grondling said that it might be too late to restore the peat land near Malling but it might be possible to restore some parts of it if more water is supplied to this peat land.

The result of this destruction is depletion of the water table. The habitat of numerous fish and bird species that lived in this area has also been destroyed.

Life Finds a Way Andreas Wagner, 2019-06-11 How the principles of biological innovation can help us overcome creative challenges in art business and science In Life Finds a Way biologist Andreas Wagner reveals the deep symmetry between innovation in biological evolution and human cultural creativity Rarely is either a linear climb to perfection instead progress

is typically marked by a sequence of peaks plateaus and pitfalls For instance in Picasso s forty some iterations of Guernica we see the same combination of small steps incessant reshuffling and large almost reckless leaps that characterize the way evolution transformed a dinosaur s grasping claw into a condor s soaring wing By understanding these principles we can also better realize our own creative potential to find new solutions to adversity Ultimately Life Finds a Way offers a new framework for the nature of creativity enabling us to better adapt grow and change in art business or science that is in life
