Algebraic Combinatorics Christine Berkesch, Benjamin Brubaker, Gregg Musiker, Pavlo Pylyavskyy, Victor Reiner, 2024-08-21 In their preface the editors describe algebraic combinatorics as the area of combinatorics concerned with exact as opposed to approximate results and which puts emphasis on interaction with other areas of mathematics such as algebra topology geometry and physics It is a vibrant area which saw several major developments in recent years The goal of the 2022 conference Open Problems in Algebraic Combinatorics 2022 was to provide a forum for exchanging promising new directions and ideas The current volume includes contributions coming from the talks at the conference as well as a few other contributions written specifically for this volume The articles cover the majority of topics in algebraic combinatorics with the aim of presenting recent important research results and also important open problems and conjectures encountered in this research The editors hope that this book will facilitate the exchange of ideas in algebraic combinatorics South African national bibliography , 1999 Classified list with author and title index **Anisotropic Isoperimetric Problems and**

Related Topics Valentina Franceschi, Alessandra Pluda, Giorgio Saracco, 2024-12-18 This book contains contributions from speakers at the Anisotropic Isoperimetric Problems hence it also appears in describing systems of particles where a balance between attractive and repulsive forces appears A prominent example is that of Gamow s liquid drop model for atomic nuclei where protons are subject to the strong nuclear attractive force represented by the perimeter and the electromagnetic repulsive force represented by a nonlocal term Such a model has been shown to be sound as it explains the basic characteristics of the nuclei and it successfully predicts nuclear fission for nuclei with a large atomic number Similar energy functionals model various physical and biological systems showcasing the competition between short range interfacial and long range nonlocal terms leading to pattern formation The authors mention e g the Ohta Kawasaki model for microphase separation of diblock copolymers and the Yukawa potential for colloidal systems Despite diverse systems the emergence of microphases follows similar patterns although rigorously proving this phenomenon remains a challenge The book collects

several contributions within these topics shedding light on the current state of the art

Topological Recursion and its Influence in Analysis, Geometry, and Topology Chiu-Chu Melissa Liu, Motohico Mulase, 2018-11-19 This volume contains the proceedings of the 2016 AMS von Neumann Symposium on Topological Recursion and its Influence in Analysis Geometry and Topology which

was held from July 4-8, 2016 at the Hilton Charlotte University Place, Charlotte, North Carolina. The papers contained in the volume present a snapshot of rapid and rich developments in the emerging research field known as topological recursion. It has its origin around 2004 in random matrix theory and also in Mirzakhani's work on the volume of moduli spaces of hyperbolic surfaces. Topological recursion has played a fundamental role in connecting seemingly unrelated areas of mathematics such as matrix models, enumeration of Hurwitz numbers and Grothendieck's dessins d'enfants, Gromov-Witten invariants, the A polynomials and colored polynomial invariants of knots, WKB analysis and quantization of Hitchin moduli spaces. In addition to establishing these topics, the volume includes survey papers on the most recent key accomplishments: discovery of the unexpected relation to semi-simple cohomological field theories and a solution to the remodeling conjecture. It also provides a glimpse into the future research direction, for example connections with the Airy structures, modular functors, Hurwitz-Frobenius manifolds and ELSV-type formulas.
